

What is the best way of controlling pollution?

Learn how to design and perform comparative techno-economic analysis of pollution control technologies in a systems framework. The course involves lectures, homework and group projects for case studies.

Pre-requisites: Basic thermodynamics and reaction stoichiometry.

Special Topics
24-646, 12 Units

Energy Systems

Fall 2017
M&W: 4:30-6:20 PM

Environmental Control Technologies

Instructor: Hari C. Mantripragada (mharichandan@cmu.edu)
