

Public Printer Chart: Mac

Last updated: March 31, 2008

To complete the Printer List or Printer Browser dialog box (as described in the [Install Printer Driver](#) section of the Mac installation instructions) for special print features, follow these steps:

- In the topmost popup menu, select **Advanced**.
- From the Device popup menu, select **Pharos Print Server**.
- Use the chart below for reference and to complete the remaining fields

Note: Some printer drivers (ppd files) are automatically included with the operating system. For example, Mac OS X 10.4 offers many printer drivers and 10.3 offers some. To determine if you need to download a specific printer driver, check to see if the driver already exists on your computer. To do this, check the "Printer Model:" field of the [Printer dialog box](#).

Public Cluster Printers (Mac)

#	Device Name This is the user "friendly" name that will appear in the print dialog box. Also included is the type of printer.	Device URI	Printer Model (Printer driver to download) Search for the printer model from the linked download site and download the POSTSCRIPT printer driver. You may need to reboot after the driver installation in order to see the driver files.	Special Features
	Andrew Central B&W By using this printer queue, your print job will be available for release at ALL black and white Cluster and Library release stations. Visit any release station to release and print your job. This print queue does NOT accomodate special print features. To use special printing features, refer to "Using Special Printing Features" for Macintosh .	popup://printing.andrew.cmu.edu:515/andrew	CMU Generic.ppd	None This printer selection offers only basic black and white printing on 8.5 x11 paper (with the exception of Hunt and CFA Clusters which allow 11x17 paper). Complex documents and/or Adobe documents may fail to print.
