User Workstation Requirements for FocusU

Web Browser
- Windows: Internet Explorer 7.0 or later, Mozilla Firefox 21 or later, Google Chrome 29.0.1547 or later
- MAC: Safari 5/1/8 or later

Flash
- Adobe Flash Player: 8.0 or later

Java
- 1.6.0.25 or later updates

An easy way to check your browser and flash version is to use the Information Security Office (ISO) Patch Check tool by clicking:
http://www.cmu.edu/iso/patch-check/

When you click on the ISO Patch Check link, your default browser will open and identify your browser version as well as the version of Flash and Java. Crosscheck with the list above to be sure your laptop or computer has the correct versions for FocusU.

Here is an example of a computer that is up to date with the latest version of the browser (in this case, Firefox). Note that the ISO Patch Check is notifying the user that other browsers should also be checked.

- If your laptop has one of the web browsers listed and a Flash 8.0 or later congratulations!
- If your laptop does not have one of the listed web browsers please follow the instructions listed in the ISO Patch Check tool to upgrade to the most recent browsers.
- If you need assistance to update your computer, please contact your local IT support, or the Computing Services Help Center at it-help@andrew.cmu.edu or 412-268-4357.
