Connected Devices

By: Romulus Periera
September 20, 2011

Abstract:
We live in a world that seems smaller by the day. Personal smart devices connect us to whatever we need and whomever we need to reach, instantly. For a world that's increasingly "on-the-go" the stuff we take along has to integrate itself into our daily activities — we can't stop to interact with the technology. That's the Looxcie assumption, a handsfree, point of view social sharing camcorder that Leverages smartphones, cloud services and personal consumer devices, Looxcie is a new device in the emerging category of "personal-devices-as-a-service". The Looxcie mission is to allow you to share your life as your live it, with the people that matter, anytime, anywhere.

About the Speaker:
Romulus Pereira is the CEO and Founder of Looxcie Inc. Prior to Looxcie he was the president and CEO of Riverstone Networks, where he pioneered the metro Ethernet market, too the company public, and built it into a leading supplier of networking equipment to tier-1 carriers worldwide. Before founding Riverstone, Romulus directed sales, services, marketing and engineering organizations at Cabletron Systems as the company's COO. He also co-founded YAGO Systems, where he served as CTO and Vice President of engineering. Prior to that, Romulus held various management and technical positions at Cisco Systems, Kalpana, and Wollongong. He has a B.S. and M.S. degrees in computer engineering from Santa Clara University.
