Problem
Expensive elderly health care system due to extensive human involvement in recording patient vital signs and management of health records.

Solution
Provide patient caregivers with the tools to:
- Record patient vital signs using off-the-shelf Bluetooth sensors
- Notify designated recipients when vital signs cross preset thresholds
- Automated record management using Google/Microsoft health vaults
- Instantly share patient vital records with physicians and family members

Markets
- Continuing Care Retirement community
- Home healthcare
- Independent caregiver facilities
- Rehabilitation centers

Competitors
- Sportstracklive, Wellcore.com and CardioTrainer from WorkSmart Labs
- Differentiator: Our solution is integrated with wide array of sensors and integrates with popular third party PHRs

Previous work
Home automation and data center server wellness monitoring systems
