PROBLEM
• Information available for planning trips is scattered
• Applications that help in planning trips are either too complicated or do not consider all the factors
• Simple one stop solution for planning trips is not available

GOAL
To build a one-stop solution website that recommends a customized and detailed itinerary for the trip to the users based on factors such as destination, duration, budget, and activity preferences.

FEATURES
• Create a scheduled itinerary of “things to do” at the user specified destination considering user preferences
• Provide detailed information about each place such as logistics and contact information, user reviews, and pictures
• Trip time estimates (by car, bicycle or on foot)
• Map Locations
• The best itinerary for the chosen destination
• Print the itinerary

ARCHITECTURE

APPLICATION

FUTURE WORK
• Create user profiles
• Schedule itinerary considering optimized route and more...

ACKNOWLEDGMENT
• Todd Sedano and Bob Williams (Distinguished professors of the Real World Software Engineering for Entrepreneurs) for their guidance.
• Zara Axelrod (Graphic Designer) for the logo design.
• Sunil Pissaye (CMU alum) for his suggestions on the product design.
• CMU faculty and students who gave us valuable feedback
