### **WHAT IS "BROAD SPECTRUM" PROTECTION? "**

Broad Spectrum"protects against UVA and UVB rays. Sunlight consists of two types of harmful rays – UVA rays and UVB rays. The UVB rays are the sun's burning rays (which are blocked by window glass) and are the primary cause of sunburn and skin cancer. UVA rays (which pass through window glass) penetrate deeper into the base layer of the skin and contributes to skin cancer. Both UVA and UVB rays can cause suppression of the immune system, which helps to protect you against the development and spread of skin cancer.
