

Leveraging Historical and Real-time Data to Meet the Challenges of Wind Power Generation

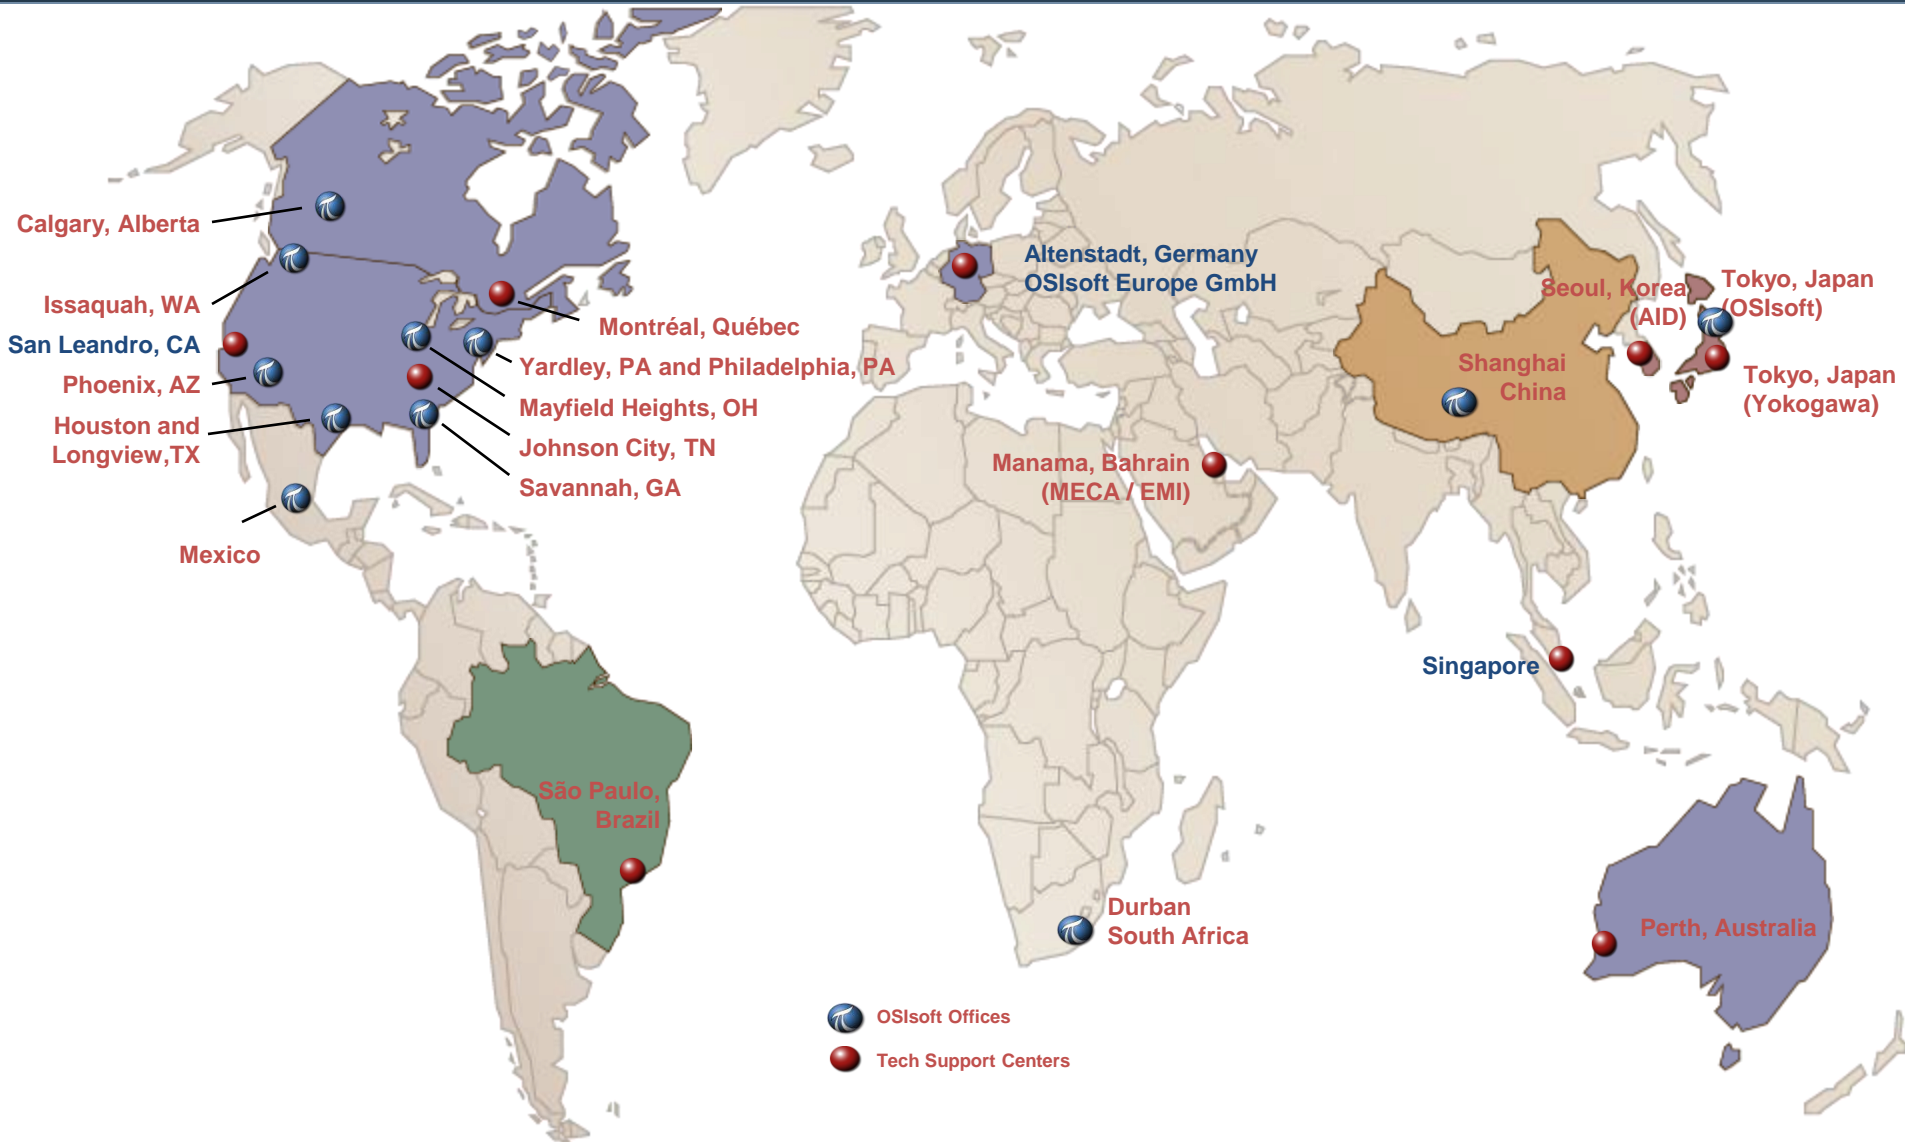

- ❑ Asset utilization
 - Availability
 - Efficiency
- ❑ Sell power at highest rates
 - Grid integration
 - Forecasting
 - Scheduling
 - Trading
- ❑ Warranty management

- ❑ Enterprise integration
 - Heterogeneous assets
- ❑ Security
 - NERC CIP
- ❑ Regulations and Compliance
 - Reporting

- ❑ Established in 1980
- ❑ Founder - J. Patrick Kennedy
- ❑ Private & Profitable
- ❑ Headquarters - San Leandro, CA
- ❑ 660 + employees
- ❑ 225 + employees in product development
- ❑ PI Installed base
 - 14,000 + systems (excluding OEMs)
 - 110 + countries
 - 40% of Fortune 1 000 process & manufacturing companies
 - 65% of Global 500 process & manufacturing companies

Where is OSIsoft in the world?

Primary market segmentation

President of Spain at RED Electrica

12 of Top 15 Owner/Operators use PI*

MW Capacity EOY 2006

- 7200MWs in single WindCORE – going global...
- Centralized M&D Center with Control – coordinated with Grid Operator – RED Electrica

- >5000MWs in Centralized M&D Center
- Distributed Control approach

- Enterprise Customer since 2007
- Developing Operations Center – Bezier, France.
- US Subsidiary – ENXCO – OCC Center - Minnesota

- Enterprise Customer since 2007/08
- Global Integration of NA, European, ME, Asian assets

- Enterprise Customer since 2007
- Distributed control, centralized monitoring & diagnostics

Targeted Industries

Power & Utilities – 30 %

Oil & Gas – 20 %

Chemicals & Petrochemicals – 10 %

Mines, Metals, Metallurgy & Materials – 10 %

Pulp & Paper- 10 %

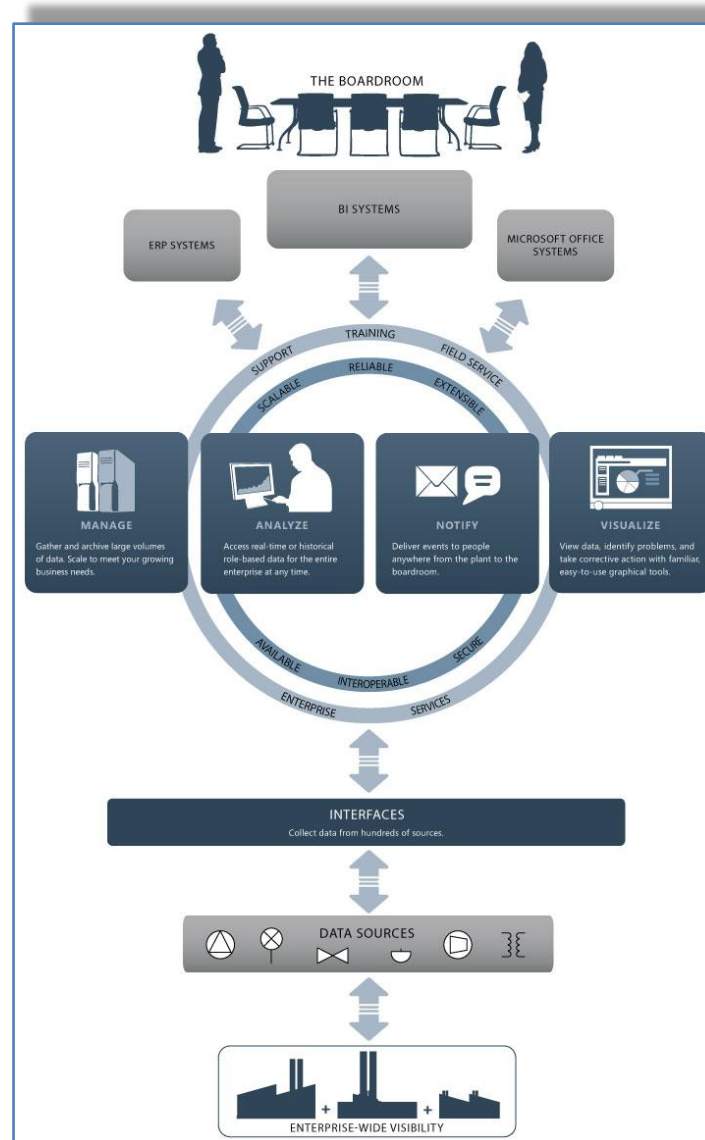

Pharma., Food & Life Sciences – 10 %

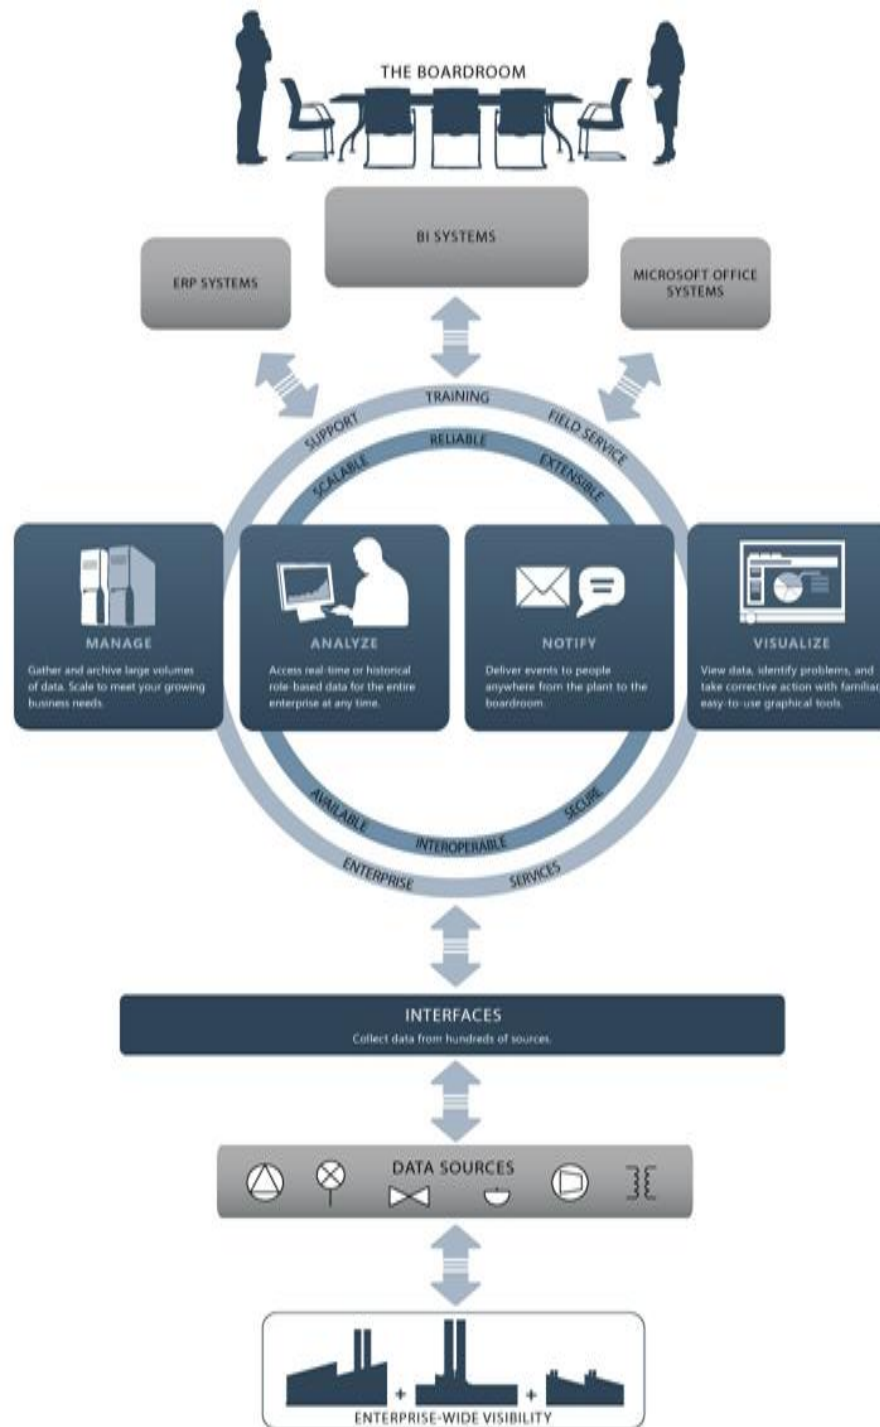

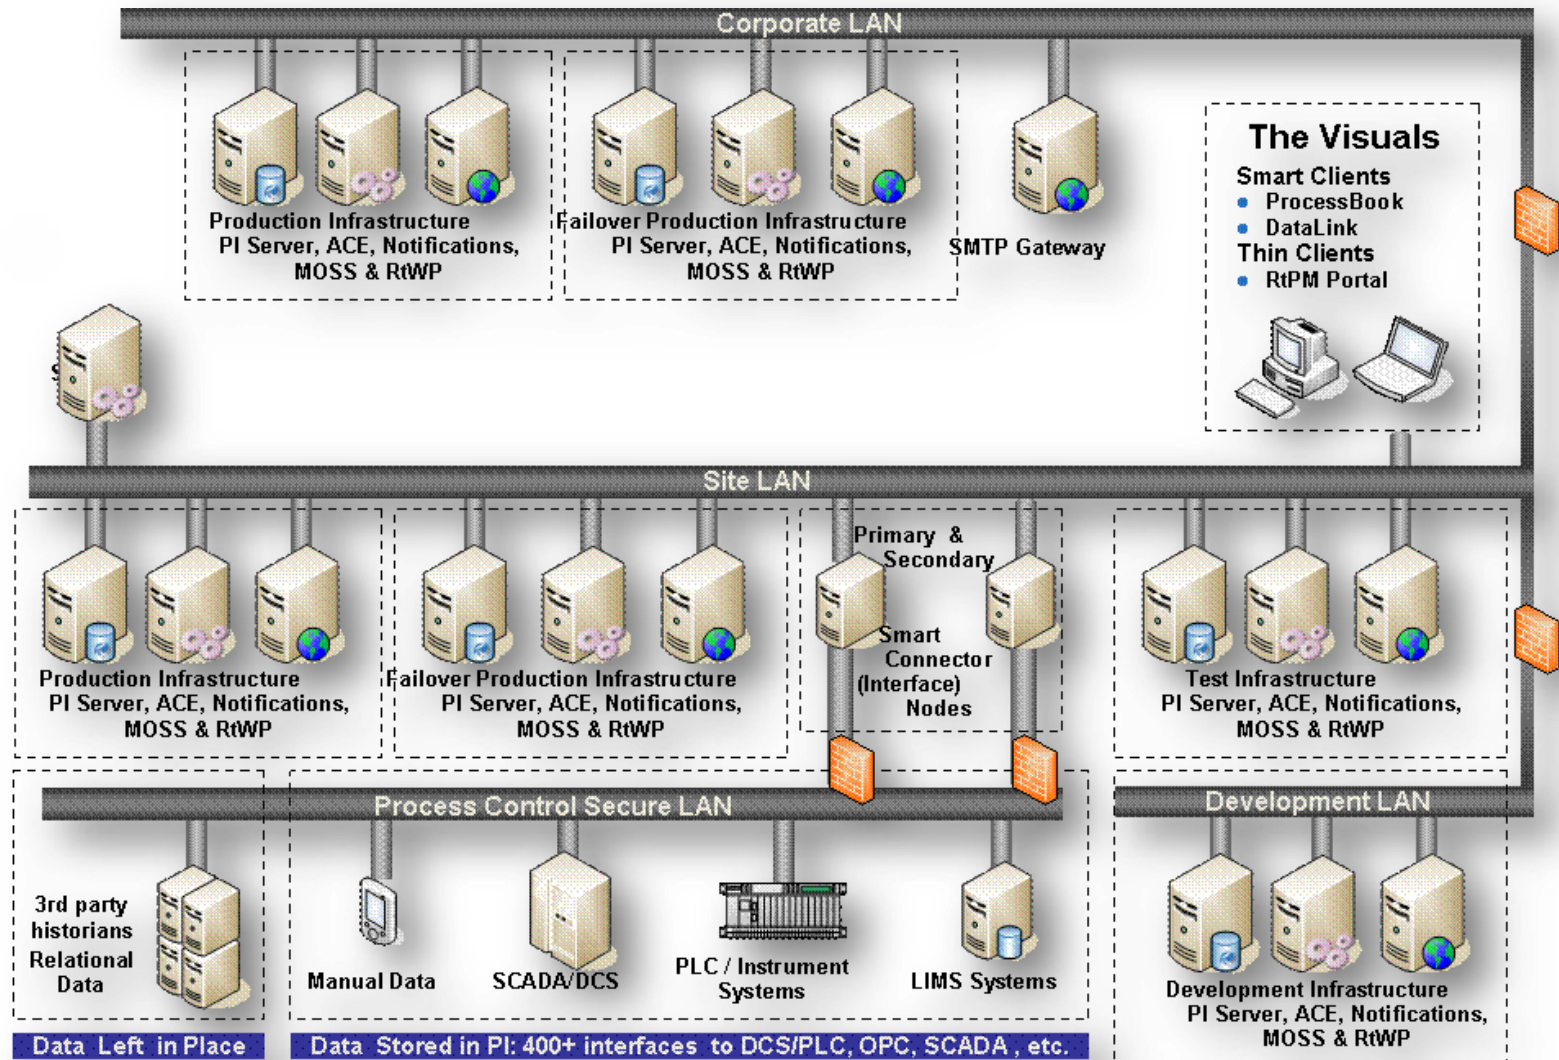

Data Centers, IT & Facilities (all industries)

Quick PI System Overview

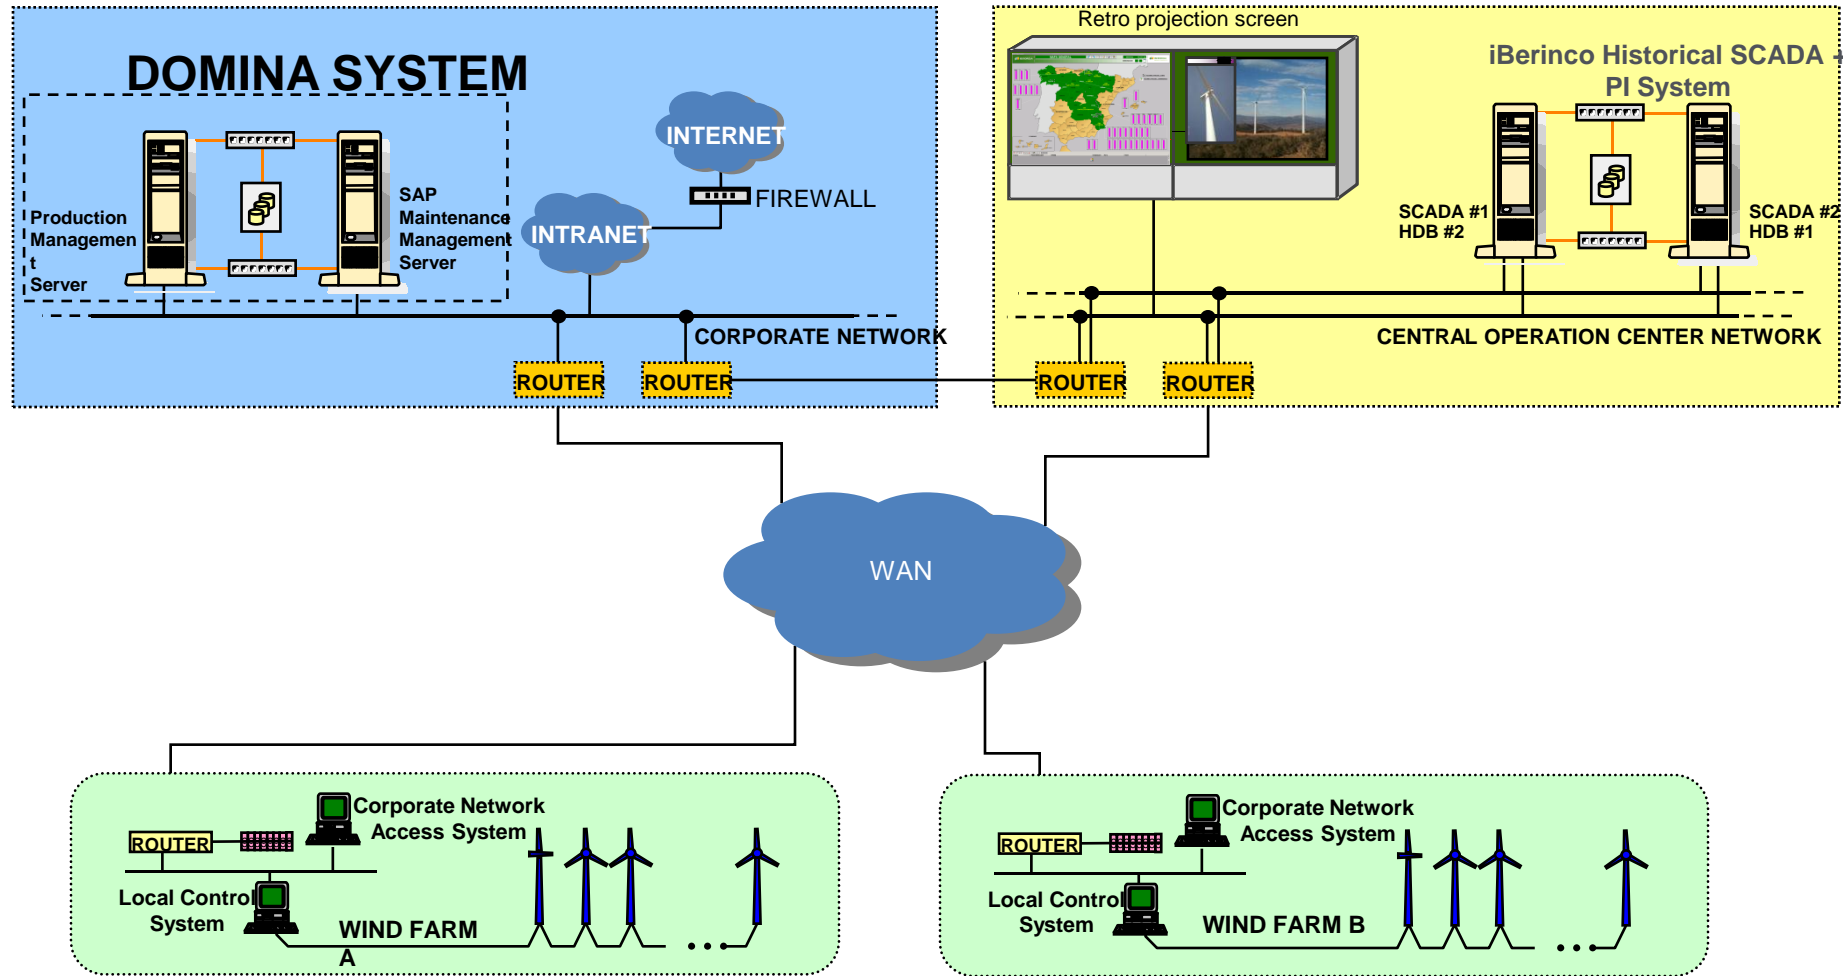

Basic Connectivity to Turbines

Customer Architecture--Iberdrola

☐ Availability

- Is asset online?

☐ Efficiency

- Is it performing to expected levels?

What is Availability Worth?

Hours	TurbineClass (kW)	Capacity Factor	Availability	Annual Expected Output (kWh)*	Busbar Price /kWh	Annual Cash Flow per WTG
8760	600	33%	100%	1,734,480	0.0425	\$ 73,715.40
8760	1000	33%	100%	2,890,800	0.0425	\$ 122,859.00
8760	1500	33%	100%	4,336,200	0.0425	\$ 184,288.50
8760	2000	33%	100%	5,781,600	0.0425	\$ 245,718.00
8760	2500	33%	100%	7,227,000	0.0425	\$ 307,147.50
8760	5000	33%	100%	14,454,000	0.0425	\$ 614,295.00

**Formula = Hours * Generator Capacity * Capacity Factor * Availability*

- A typical utility scale wind farm may have 30 to 200 Turbines
- Large owners (e.g. Iberdrola – 3500MWs) may have thousands of turbines
- A single percentage point gain/loss of “in-market” availability (e.g. turbines available to operate when the wind is blowing) for
 - Iberdrola **Total Fleet** would result
 - in a 1st Year ROI/loss of **\$4.3MUSD**.
 - NPV over 5 Years = **\$13.5MUSD @ 18% Discount Rate**
 - Based on US prices, power rate in Spain is .07 to .10/kWh produced
 - For a **Single Wind Farm of 150MWs**:
 - In a 1st year ROI of \$185,000
 - NPV over 5 years = \$576,000 @ 18% Discount Rate

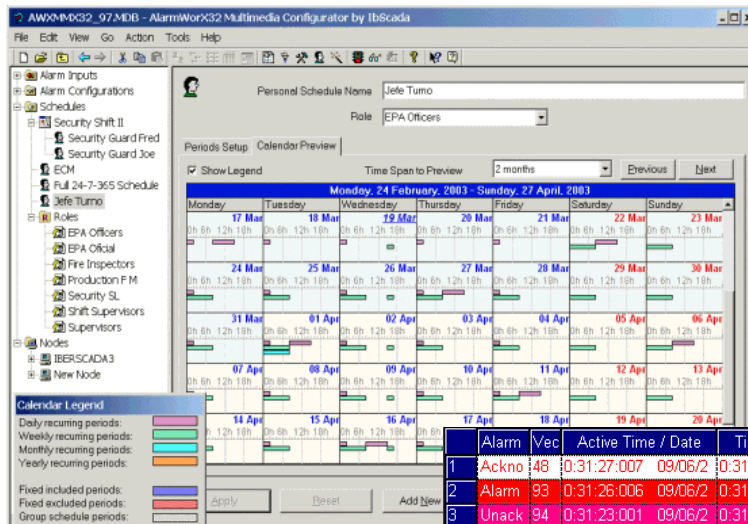

- ❑ **Cost reduction in O&M**
 - By centralizing operation, resource optimization is achieved with a significant reduction of local staff
- ❑ **Reduction of unavailability costs**
 - Continuous monitoring and remote operation of wind farms
 - Remote pre-diagnosis and activation of local maintenance squads for the solution of failures
- ❑ **Implementation of energy control functions**
 - To meet new grid operation requirements based on high penetration rate of wind energy...
- ❑ **Centralized way to communicate with other energy management centres**

Gearbox Example

Gearbox Example

Gearbox Example

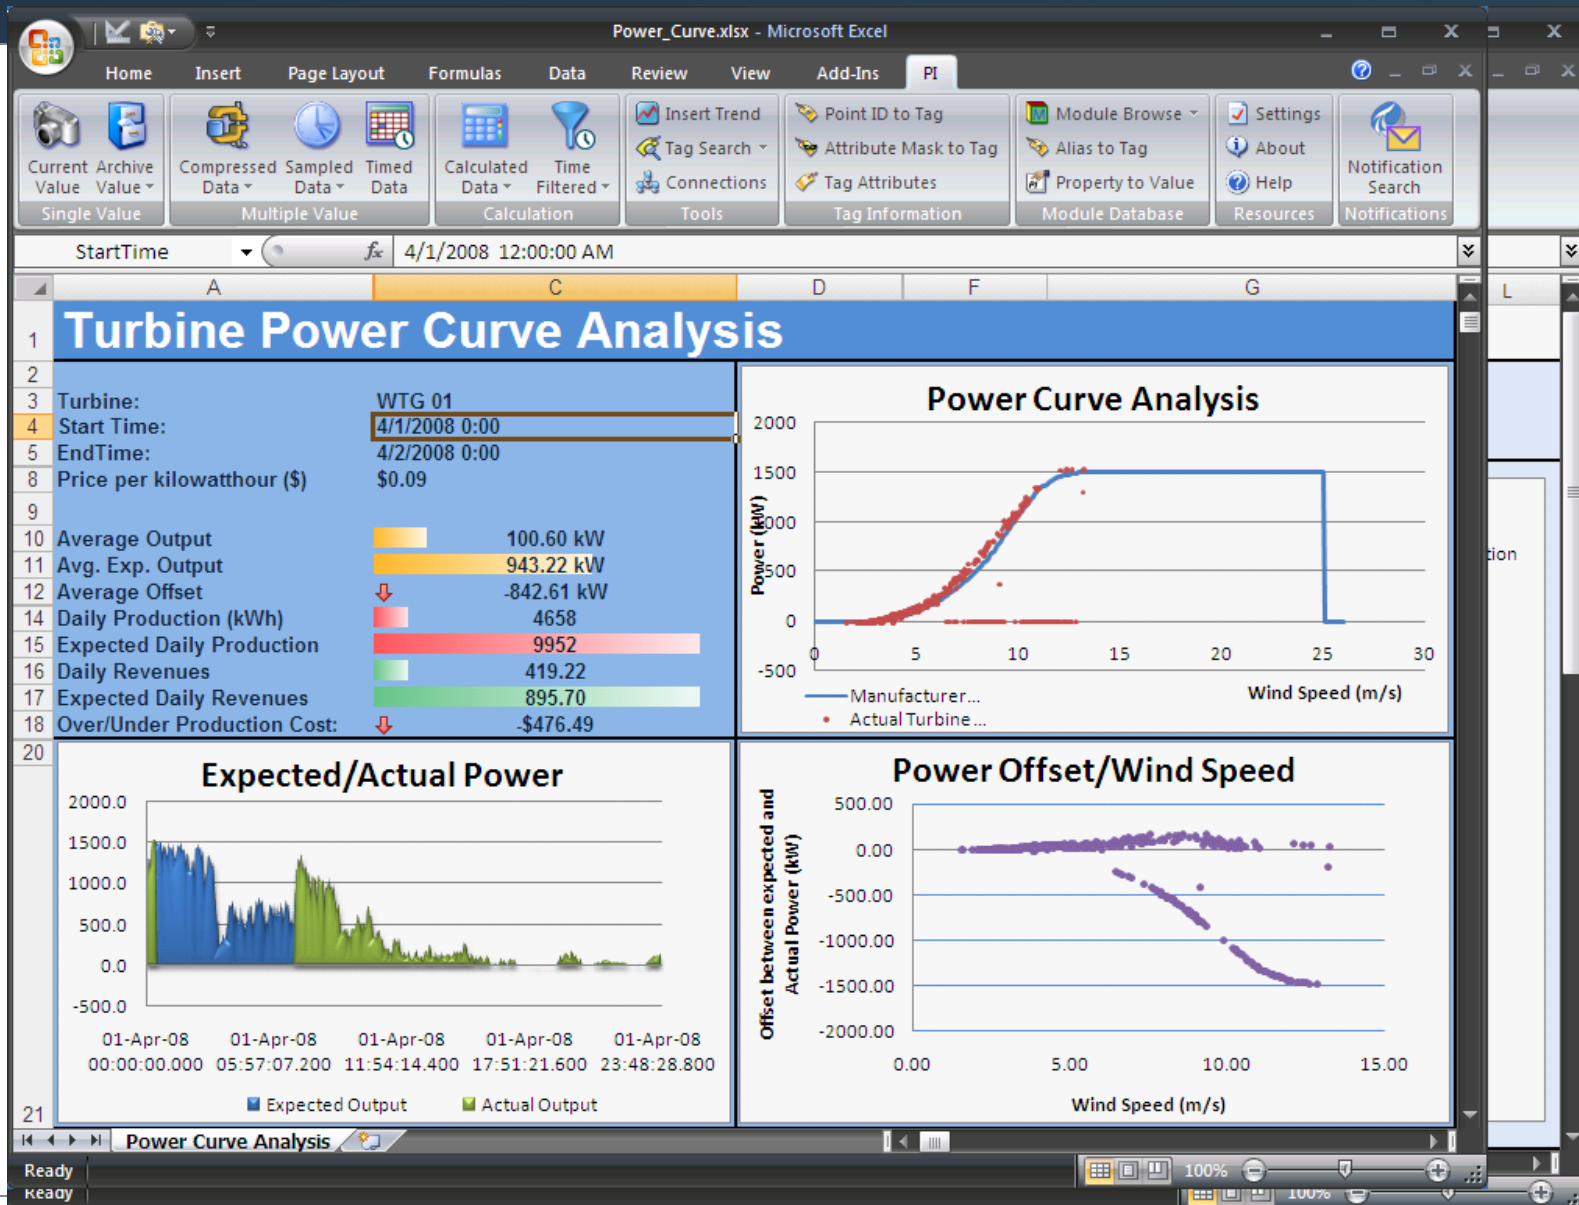

Date	Time	Hours Lost	Production Lost	Fault
5/5/04	19:15	11.90	6,627	Gen Temp High
5/9/04	20:29	11.93	7,200	Gen Temp High
5/16/04	18:25	17.32	10,297	Gen Temp High
6/29/04	16:14	382.57	157,665	Generator R&R, Gen Alignment
7/16/04	6:43	1.05	700	Nacelle Reassembly after R&R Gen
Total		424.77	182,489	\$10,024 lost revenue from 1 turbine over 2 month period

Gearbox Example

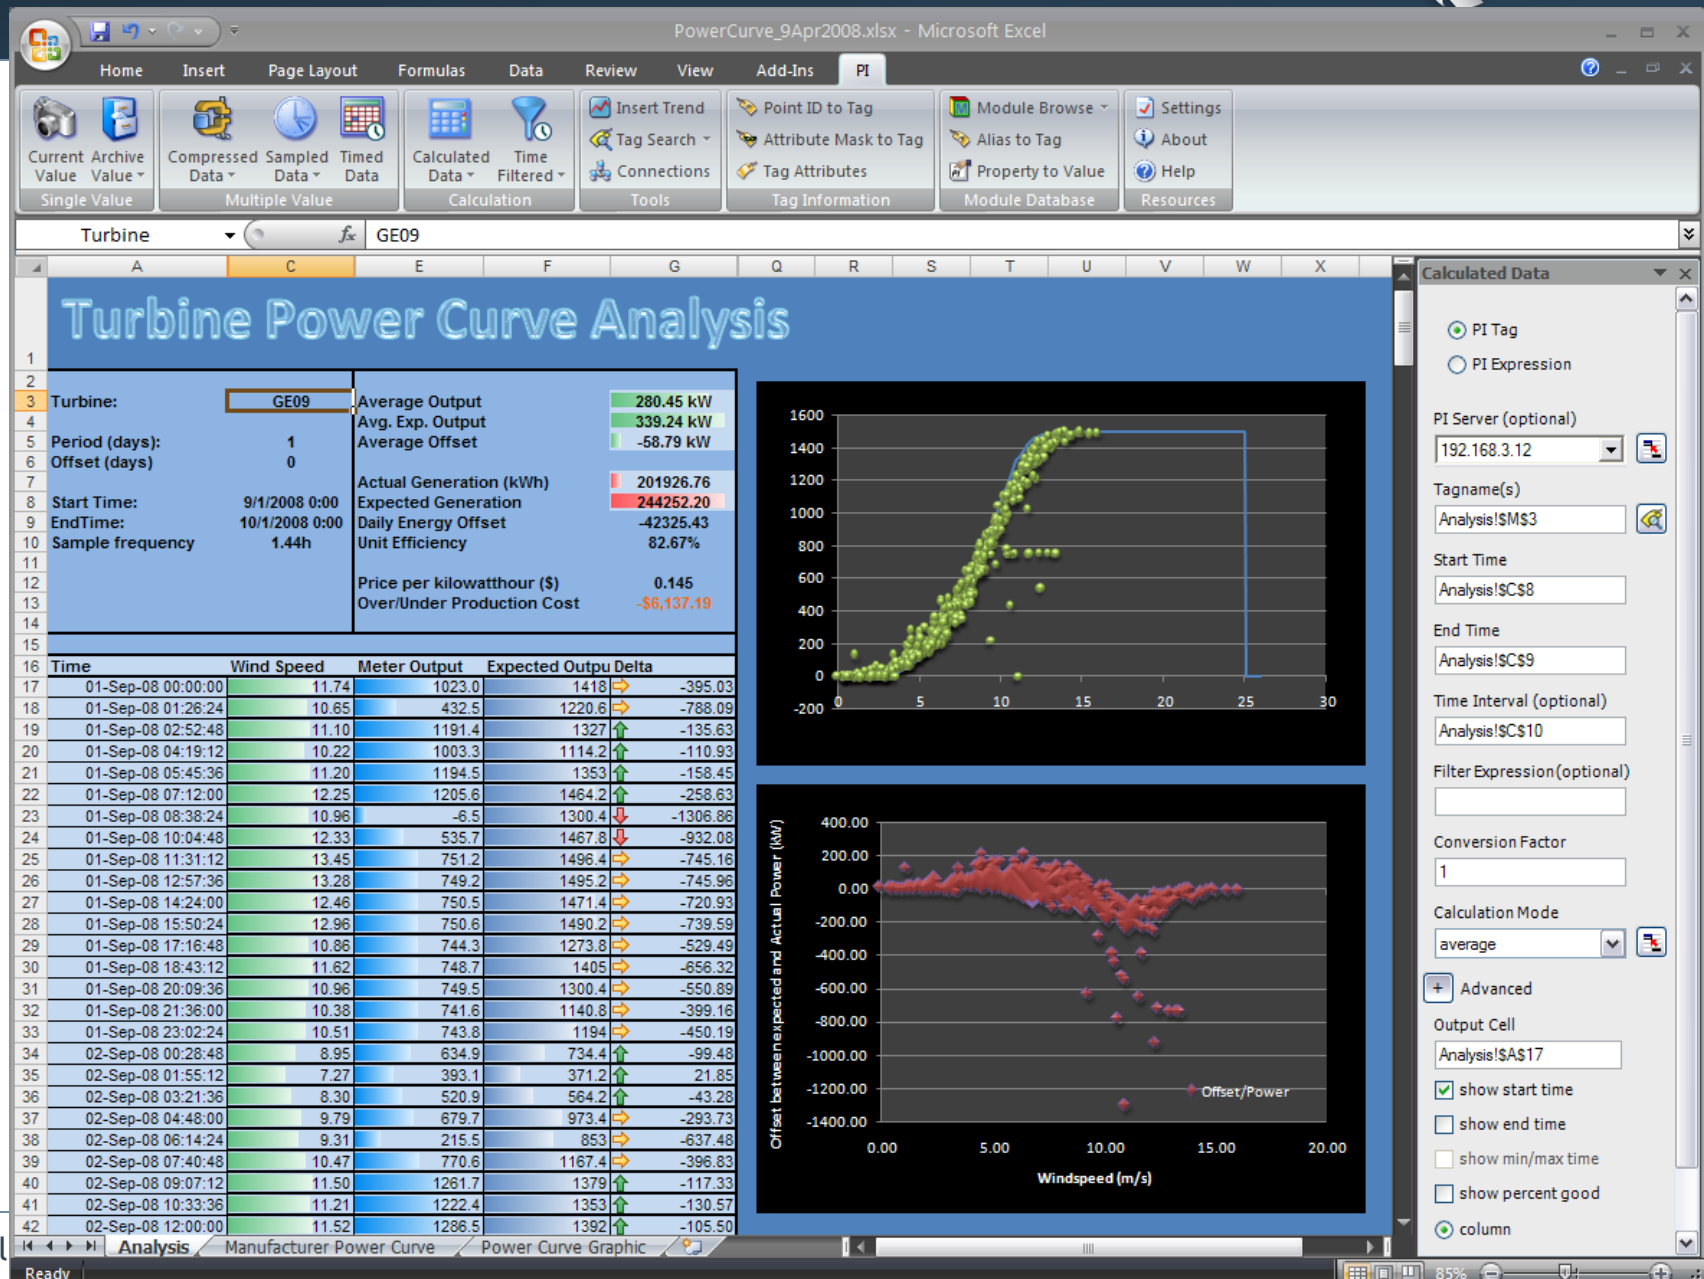

- ❑ Next examples are by one of our Engineers
 - Done on real customers systems
 - Example of getting visibility into what is going on

Availability and Efficiency Report

Power Curve Analysis (Efficiency)

- ❑ Customer—PPM (owned by Iberdrola)
- ❑ OSIsoft Users Conference, 2007
- ❑ Uses PI to:
 - Manage Fuel
 - Deal with many units and wide geographic distribution; often remote locations.
 - Normalizes data from several turbine Manufacturers
 - Deal with Complexity of markets

□ Reliability vs. Availability

Park Reliability & Availability Month-to-Date

As Of: 2007-04-12 11:00:00

Next Execution: 20 mins

	Klondike 1	Klondike 2	Stateline BPA	Stateline PAC	Big Horn
RELI	89.54 %	95.31 %	97.17 %	95.64 %	96.66 %
AVAIL	78.04 %	84.21 %	96.22 %	95.87 %	92.71 %
	Shiloh	Highwinds	Mt View	Phoenix	SW Wyoming
RELI	99.07 %	88.91 %	89.02 %	34.62 %	96.42 %
AVAIL	96.79 %	91.73 %	81.91 %	95.33 %	96.36 %
	Col Green	Elk River	Flying Cloud	Moraine	Trimont
RELI	98.01 %	98.71 %	83.11 %	93.24 %	95.09 %
AVAIL	91.88 %	92.88 %	83.38 %	83.23 %	93.89 %
	MapleRidge 1	MapleRidge 2			
RELI	92.61 %	89.86 %			
AVAIL	89.72 %	89.33 %			

□ PPM—Scotty Gilbert

- 14 day forecasts; about best at this time
- 24 hour forecasts—climatology and park data
 - They bank on this—trading is done 24 hours in advance.
 - Supply vs. buy decisions

□ PPM—Scotty Gilbert

- At end of day reconcile reality with forecast
 - Did you get the fuel predicted?
 - Did you convert to power as predicted?
- Evaluate Market exposure
 - Were assumptions true?
- Imperative to go back and understand and improve.

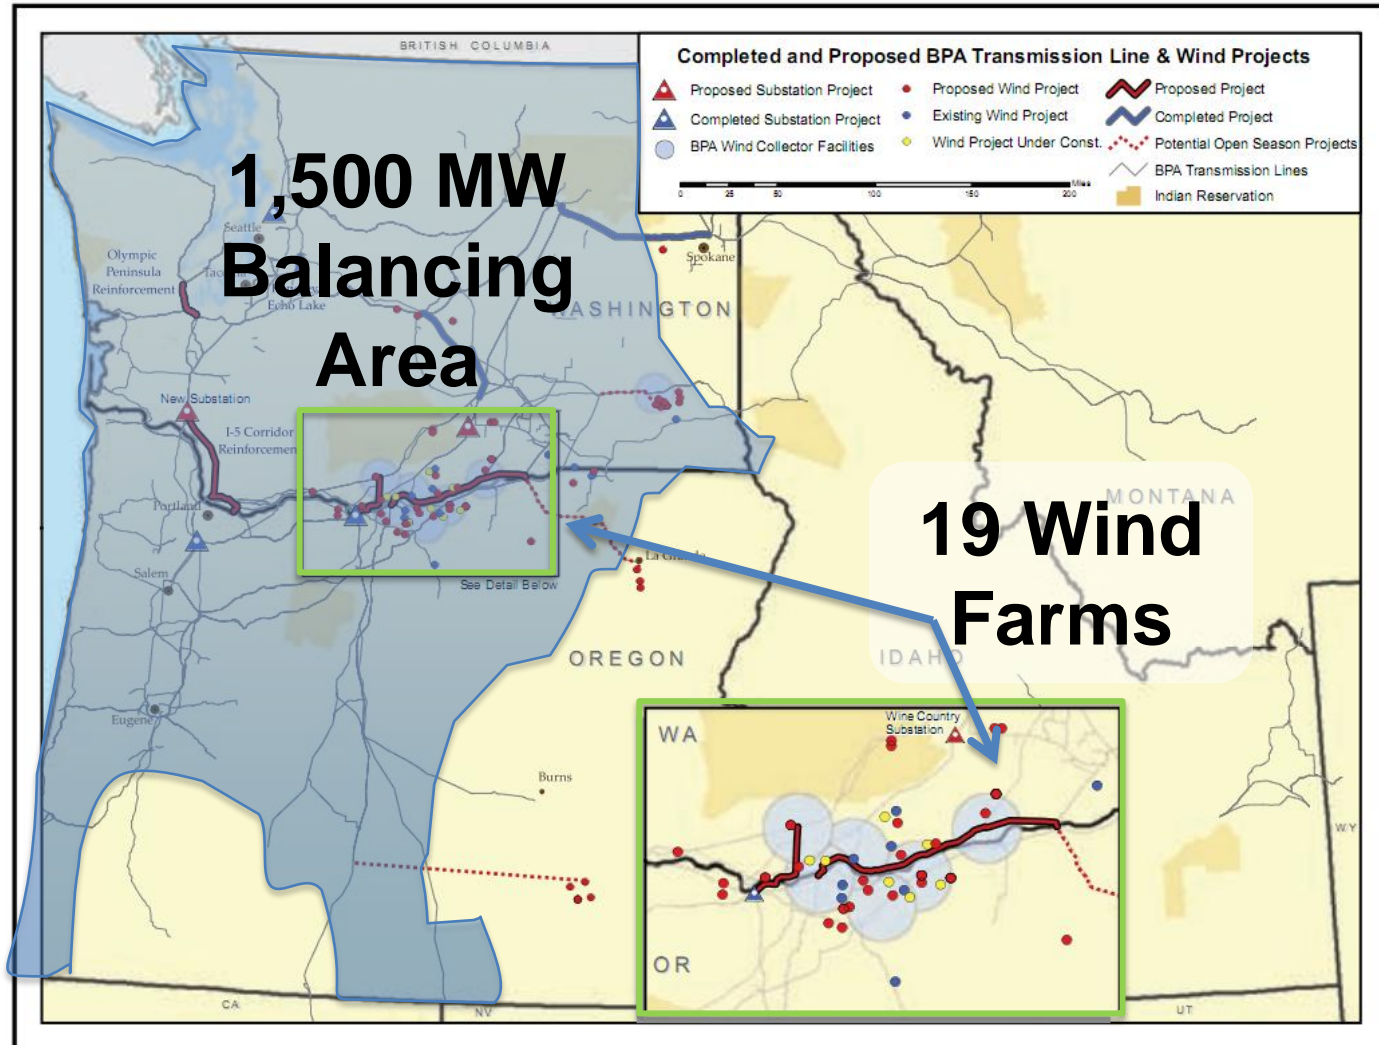

❑ Scotty Gilbert's words of wisdom

- Collect all the information
 - True production vs. predicted
 - Evaluate reasons
 - Evaluate where to invest to improve
 - Answer questions in real time.
 - Don't take weeks to answer the CEO's questions
- “Have the courage use the historical data to evaluate performance”

- ☐ ERCOT
- ☐ Bonneville Power Authority
- ☐ UWIG--AWEA

Ramping Example 1 cont.

GE-NYSERDA Study for NYISO, 10% Penetration, 2005 Operating Costs with Wind Forecasts

- Day-ahead unit commitment considers forecasted wind generation

	No Wind Forecast	SOA Wind Forecast	Perfect Wind Forecast
Total Variable Cost Reduction	\$335 M	\$430 M	\$455 M
Net Benefit		\$95 M	\$ 120 M
Wind Generation		8900 GWH	8900 GWH
Value of Forecast		\$10.70/MWH	\$13.50/MWH

Presented by GE at UWIG Sacramento Meeting, Nov. 2005

UWIG OP Impacts Meeting – April 2008 -- 8

□ Keys—

- Best 1 hour prediction is current conditions.
- Schedule maintenance when wind is likely to be down.
- Real-time data to make better maintenance decisions
 - Final maintenance planning done based on current and immediate forecast

- ❑ Send to regulators production plan
 - Hour to two hours in advance
 - Failure to deliver requires purchasing power
 - Forecasting services
 - Feed them your wind data
 - Their models forecast the next few hours
 - Calculate output potential
 - Use PI to track forecast accuracy

- ☐ Based on availability
 - (Often part of O & M contract)
- ☐ Non-competitive during boom of last few years
 - Owner now has opportunity of doing O & M on day 1
- ☐ Close monitoring of guaranteed asset provides key knowledge to transition into post warranty mode.

Warranty Management

- Manufacturers provide warranty based on availability
- Availability is natively only found in their SCADA
- PI Acts as the “Fox Watching the Hens”

Product Overview

Value now, Value over time.

© Copyright 2009, OSIsoft Inc. All rights Reserved.

❑ System that

- **Connects & Collects** (streaming data, events, strings, etc.)
- **Archives & Manages** (long time at resolution of acquisition)
- **Processes** (calculates, aggregates, analytics)
- **Visualizes** (thick, thin, portal, web, etc.)
- **Contextualizes** (metadata, structure, etc.)
- **Alerts and Notifies** (alarm, notifications, messages, etc.)

❑ Real Time Data & Events

Connect

Collect data from hundreds of sources.

Interfaces

Manage

Gather and archive large volumes of data. Scale to meet your growing business needs.

Servers

Analyze

Access real-time or historical role-based data for the entire enterprise at any time.

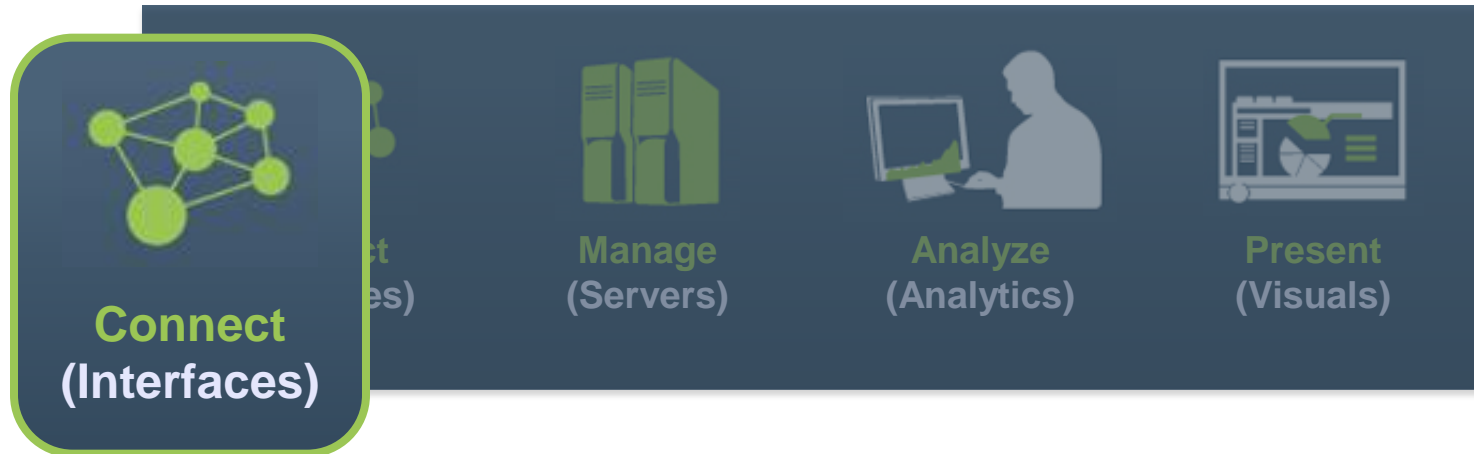

Analytics

Present

View data, identify problems, and take corrective action with familiar, easy-to-use graphical tools.

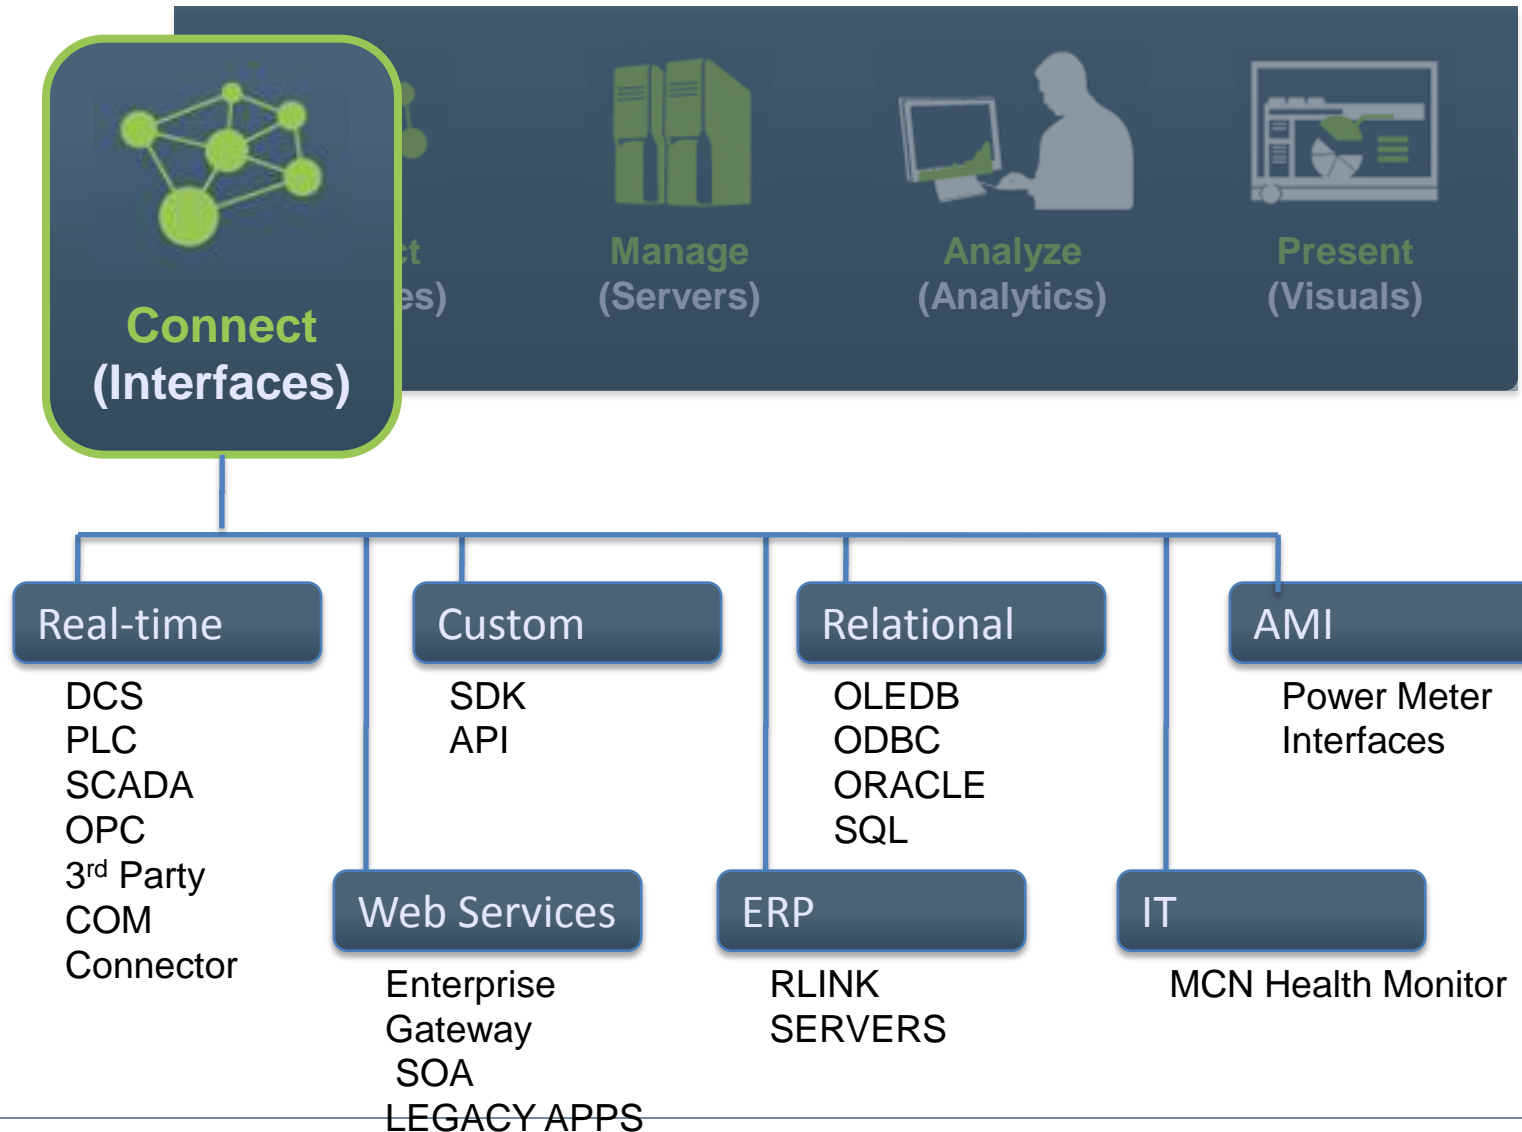

Visuals

The PI System® connects to real-time and event data every second, every minute, every day, and archives it indefinitely.

- Measure and interpret a variety of data
- Both time-series and event data
- Secure access
- From virtually anywhere and any source
- Using time intervals and sampling rates customized to your business needs

Connect to over 400 data systems and sources out of the box.

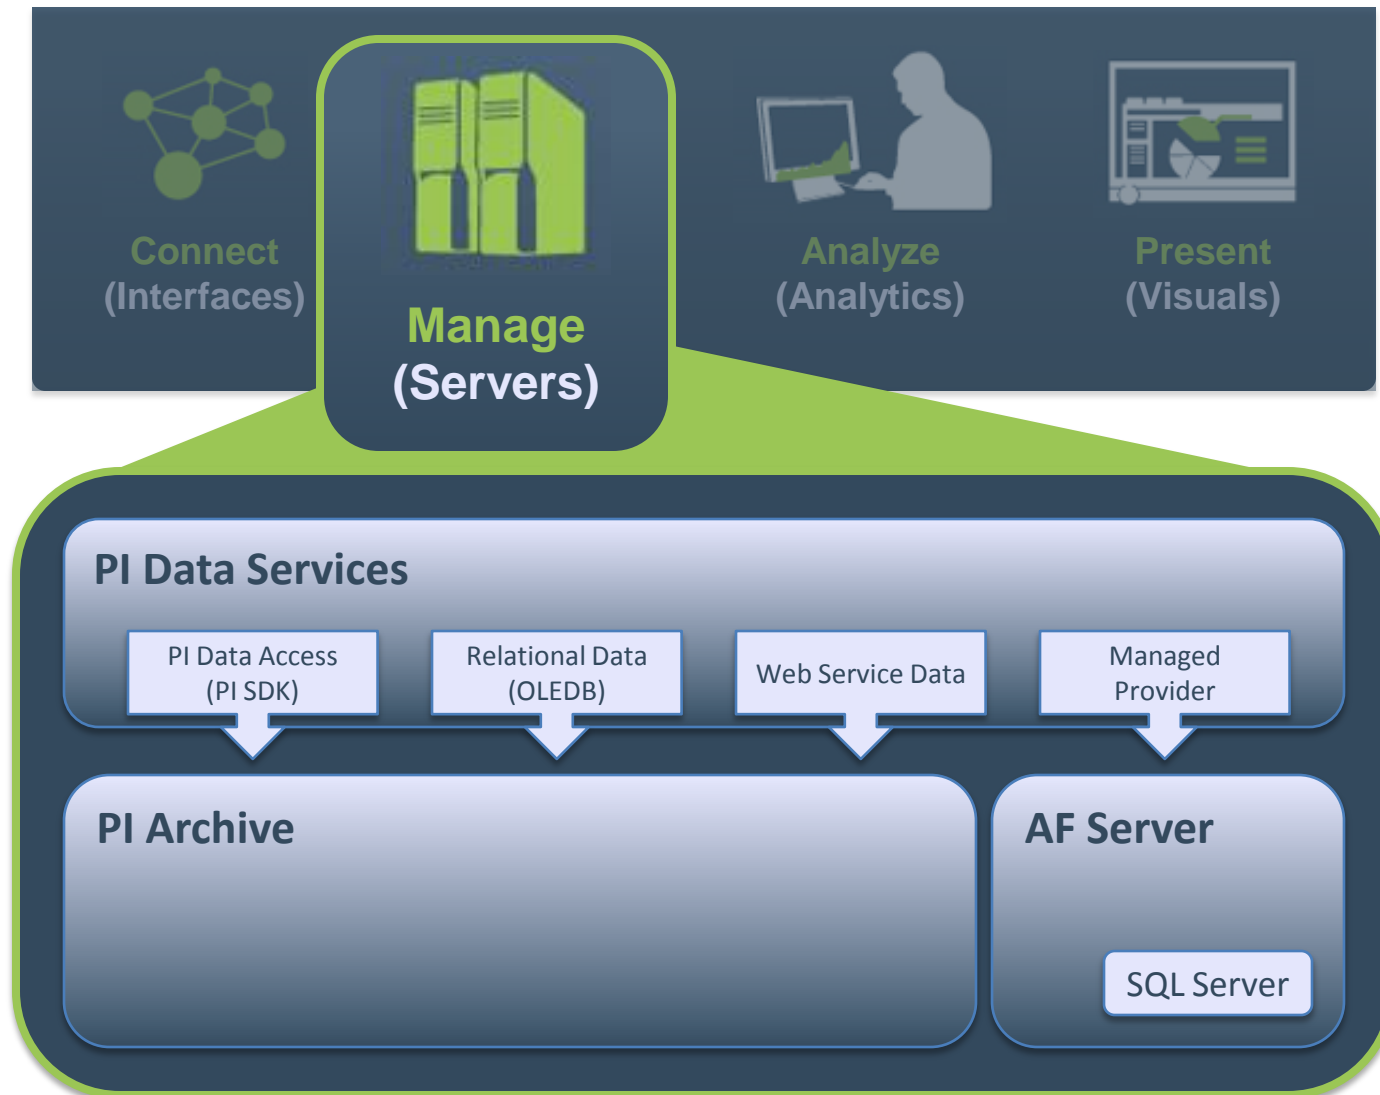

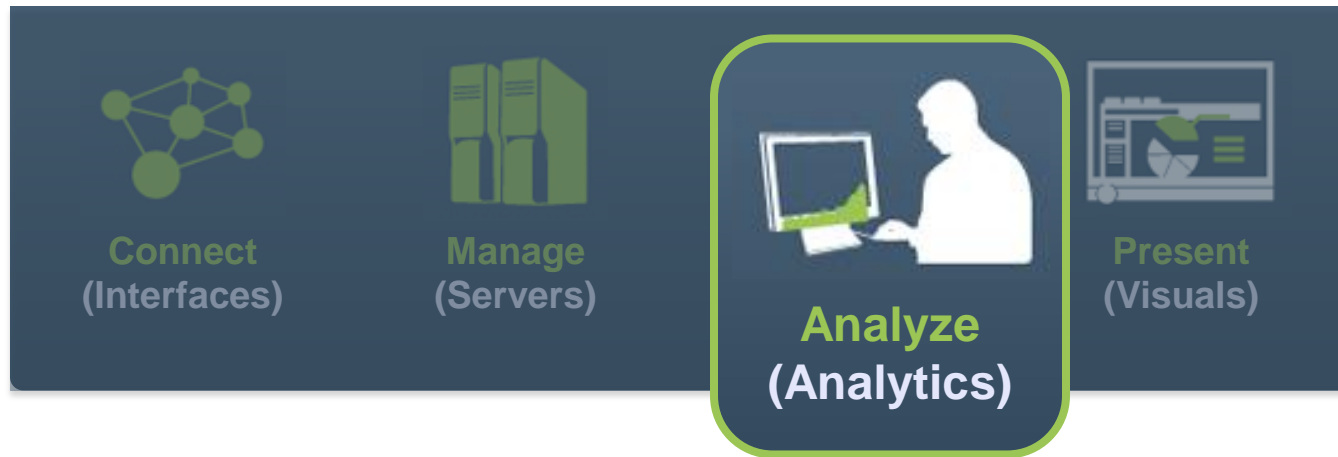

The center of the your real-time data infrastructure.

- Highly-available
- Secure
- Accessible
- Reliable
- Mission-critical, role-based information to make informed decisions

Ensure that everyone has the same information.

The standardized system provides— “one version of the truth.”

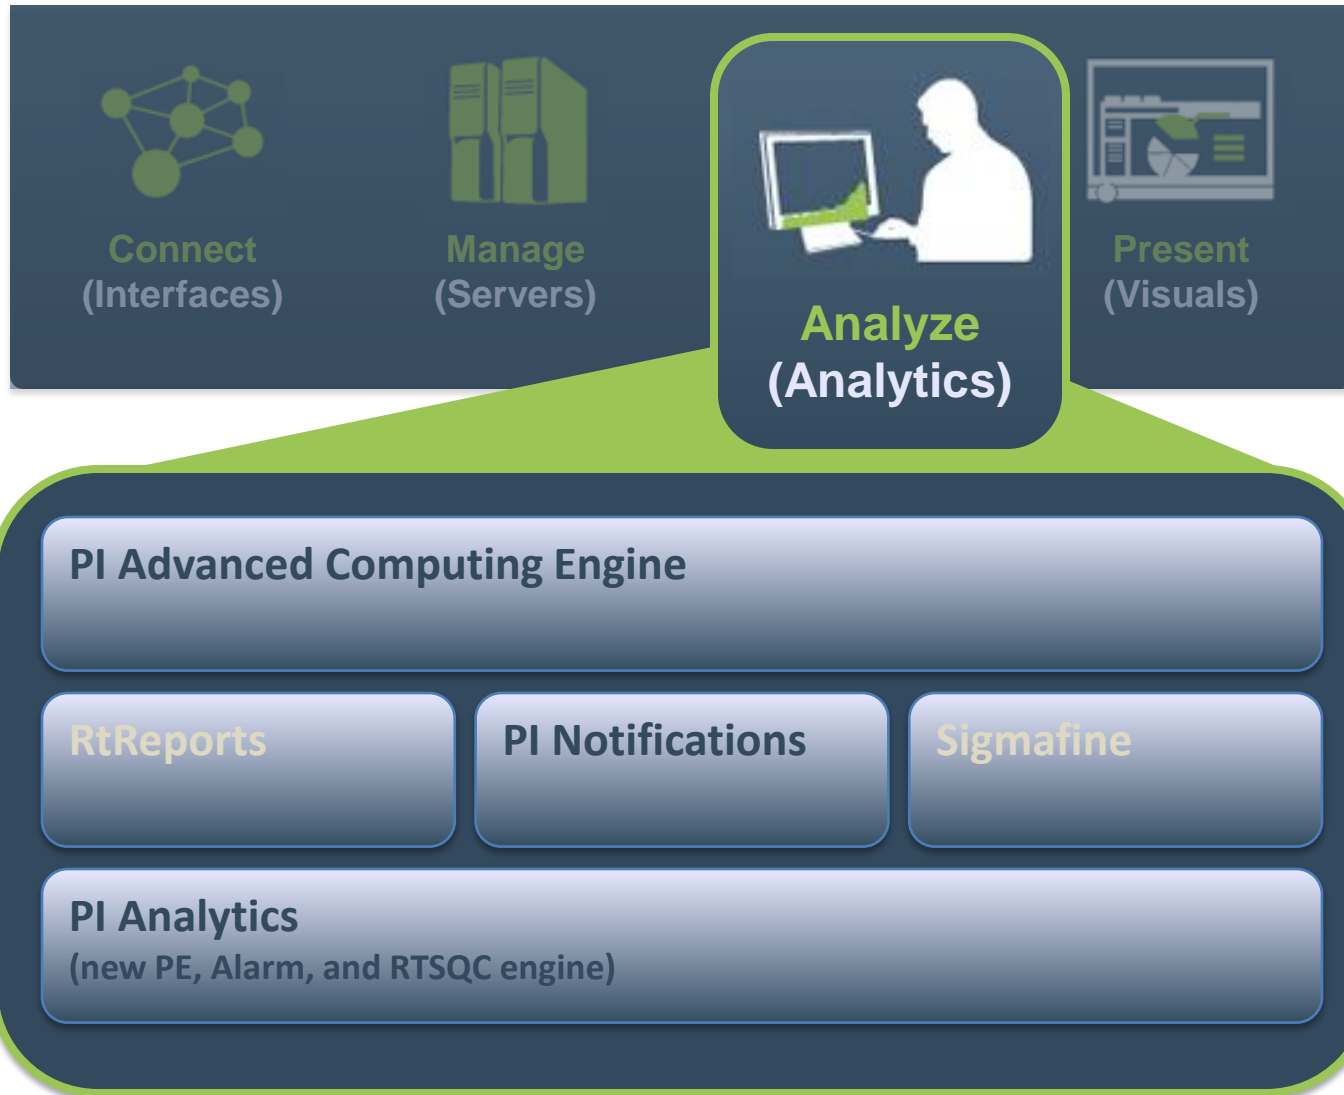

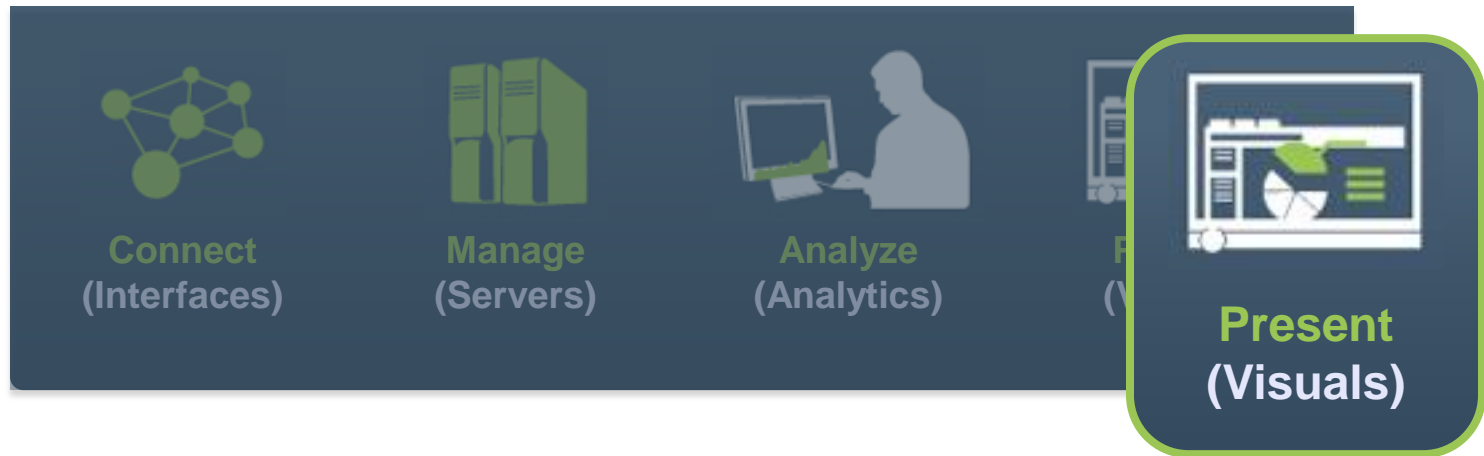

Convert real-time data into actionable information (post processing)

- Equations, calculations and business rules
- Reports
- Batch reports
- Notifications and Alerts

Measure and improve business performance.

PI System® Visuals are a configurable suite of intuitive, easy-to-use graphical tools that simplify decision-making.

Decision makers can use familiar desktop tools such as:

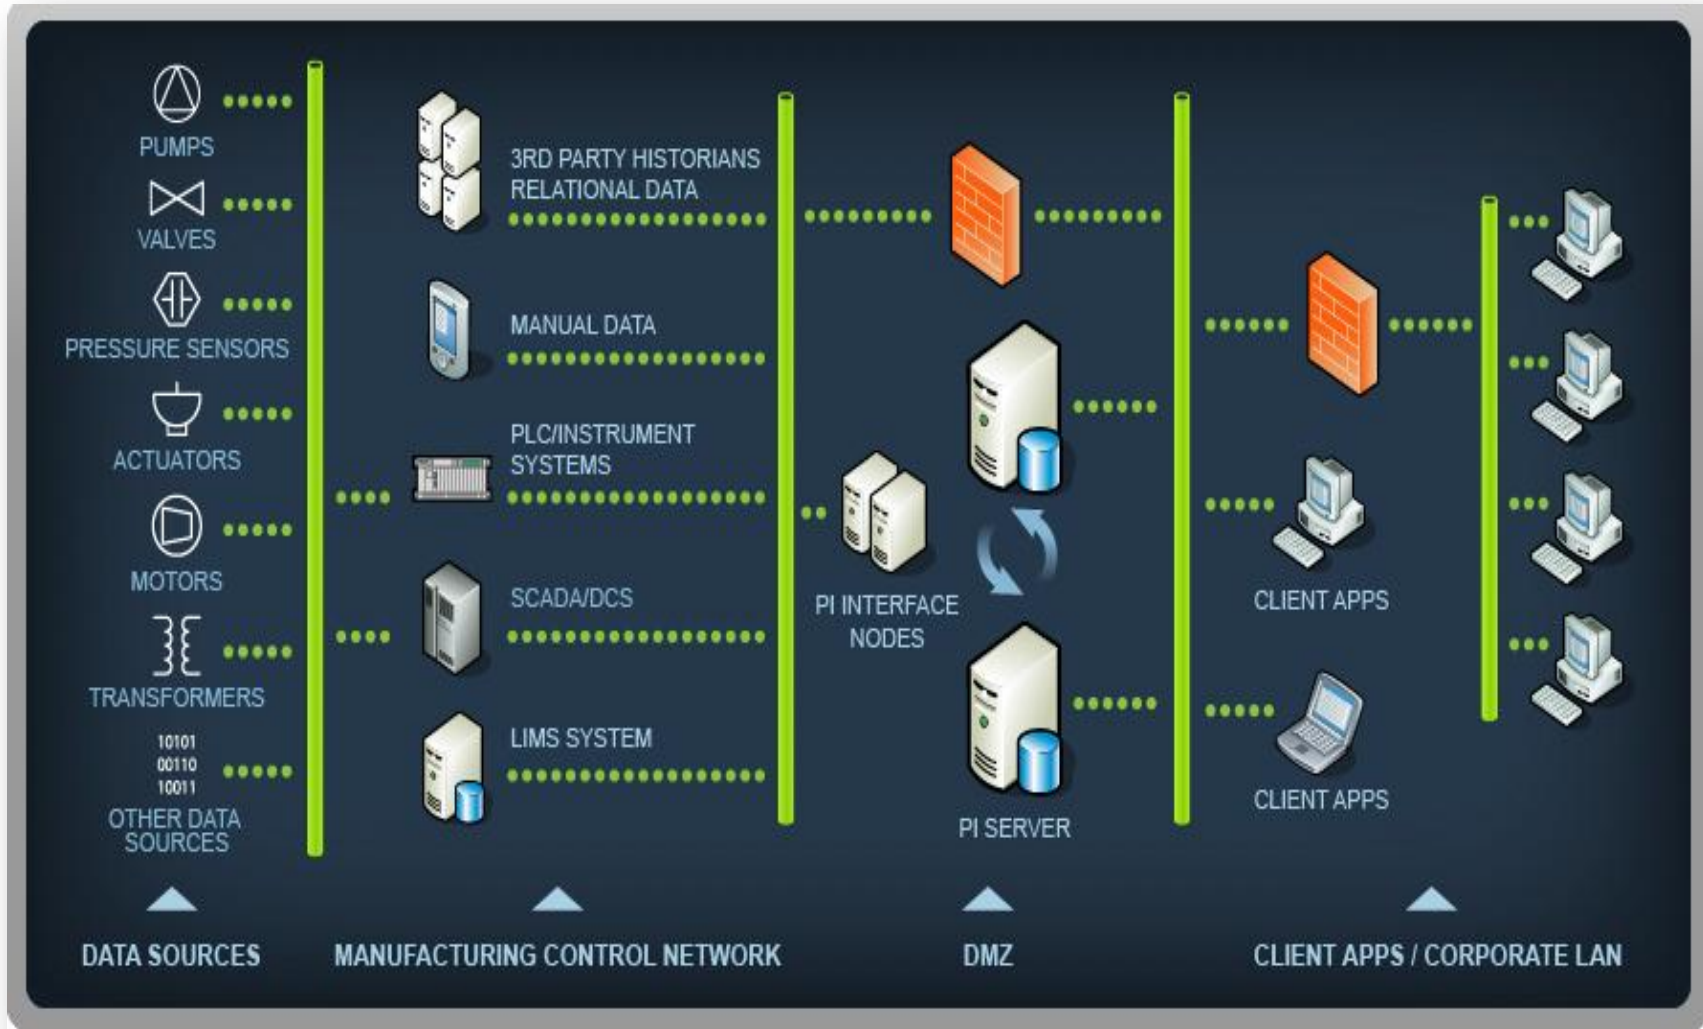

- OSIsoft's PI ProcessBook
- Microsoft Office Excel or Microsoft Office SharePoint Server
- SAP Enterprise Portal

Empower informed decisions and drive business success.

PI Infrastructure - Large Complex

Enterprise Wide Infrastructure (EWI)

How PI delivers value...

- ☐ Application and industry “Agnostic”
- ☐ Value out of the box
- ☐ “Fits in place”
- ☐ Scalable
 - Small, through medium to large and very large system
 - Simple to complex systems
 - Slow to high fidelity in the data rate (events per second),
 - Low to high intensity of pre and post processing (analytics)
- ☐ Preserves operational knowledge of an enterprise
- ☐ Enhances the capability of scarce workers
- ☐ Reliable and low maintenance by the user (striving to remain)
- ☐ Manages both the real time data and its data communications infrastructure - convergence

What is tangible value for Customers?

- **Avoided \$150 Million in Capital Spending to meet Environmental legislation**

- **Reduced maintenance costs by 3% and lowered systems management costs by a 3 to 2 ratio**

- **Saved \$20 million in Energy Costs**

- **Eliminated \$12 million in annual recurring energy costs**

- **Saved \$5 per ton in Maintenance costs in Paper Mill operations**

What is tangible value for Customers?

- **\$2.4 million savings in just one chemical plant, in production and maintenance**

- **Improved controlling over operations gains 41% return in 3.5 years (OEE, KPI's)**

- **\$1M Reduction of Electricity Costs in First Year**

- **\$5 million benefits from capture of KPI's and related performance data from operating facilities**

- **Increased diesel yield earned an \$1 million increase in profitability**

- **Saved over \$500,000 in one mill by using PI for real time costing and decision support for operators**
