Economics (BA)

Major: Academic Advisor: Kathleen Conway (Tepper Quad 2470)

At its most fundamental level, economics is the study of how scarce resources are allocated. What will be produced and consumed, how much, and by whom? These questions, central to the wellbeing of people throughout the world, are the focus of economics. Economists identify, model, and analyze problems, developing meaningful solutions for the challenges confronting society.

Economists are also active participants in the processes and institutions through which the pressing concerns of society are addressed. Economists help businesses, political bodies, and other organizations make better decisions through the development of market strategies, the promulgation of regulatory structures, and the formulation of appropriate government policies. Increasingly, economists are taking advantage of new technologies to design and implement new markets and exchange mechanisms.

Because this curriculum is highly sequenced, it is important to plan out each semester's courses with your advisor. Not all courses are offered both fall and spring semesters.
