

# Uncinate Fasciculus

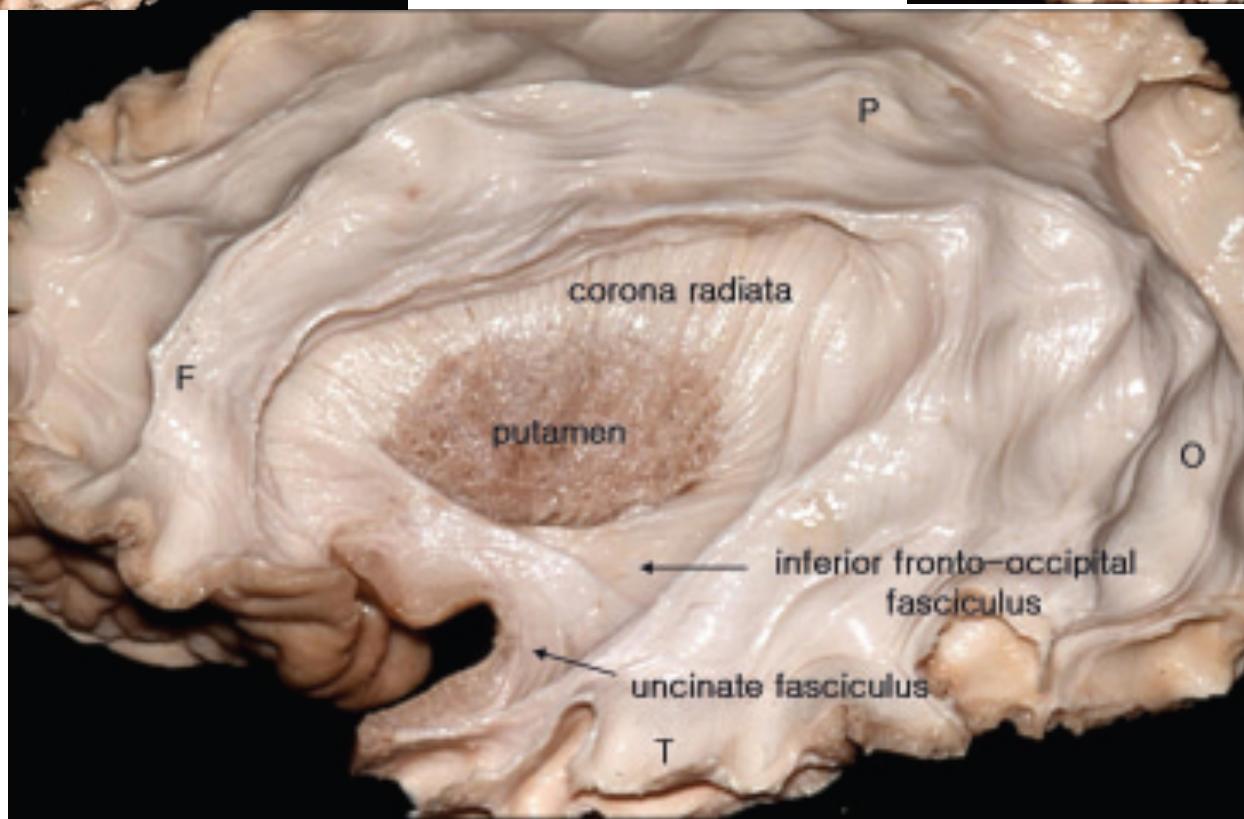

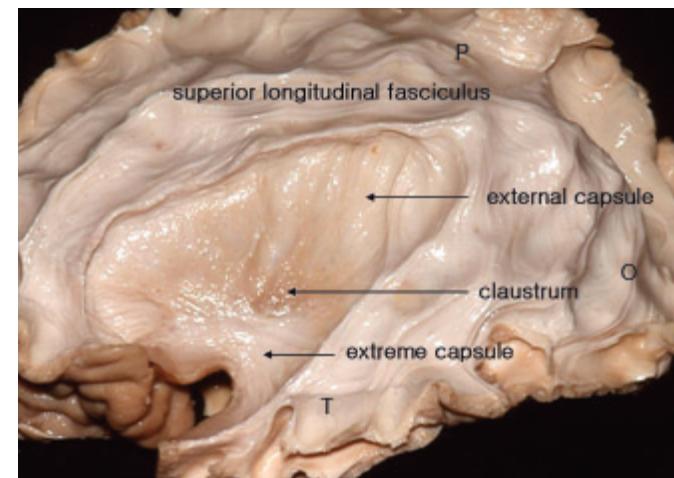

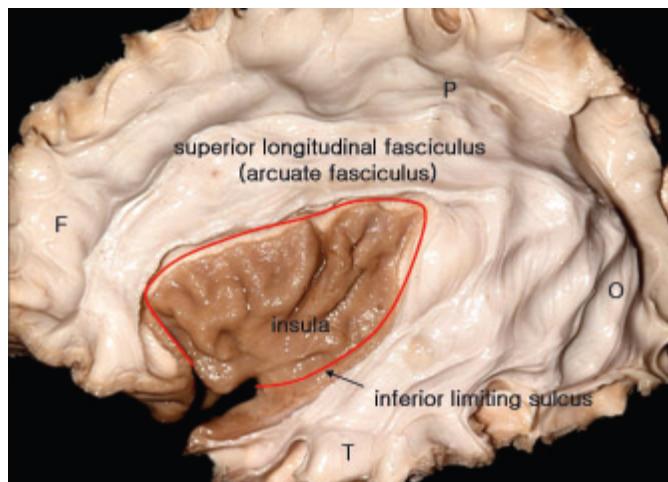

Jessica W. O'Brien  
Virtual Neuroanatomy  
November 4, 2014

# Uncinate Fasciculus

- Bidirectional, long-range white matter tract connecting orbitofrontal cortex with anterior temporal lobes

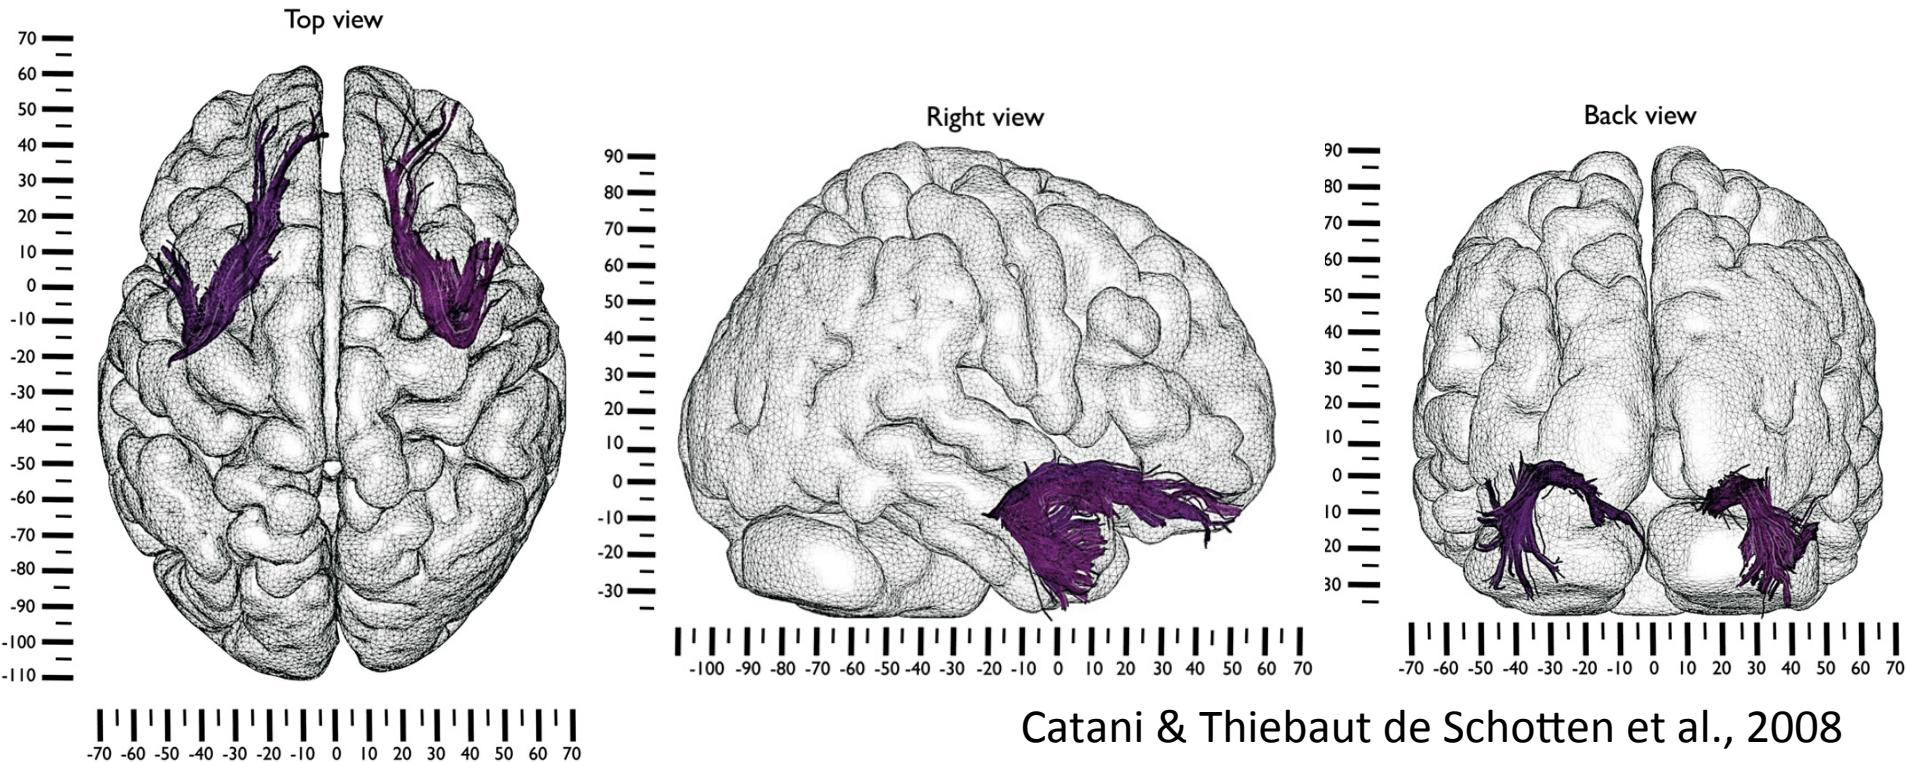

Catani et al., 2002; Thiebaut de Schotten et al., 2012

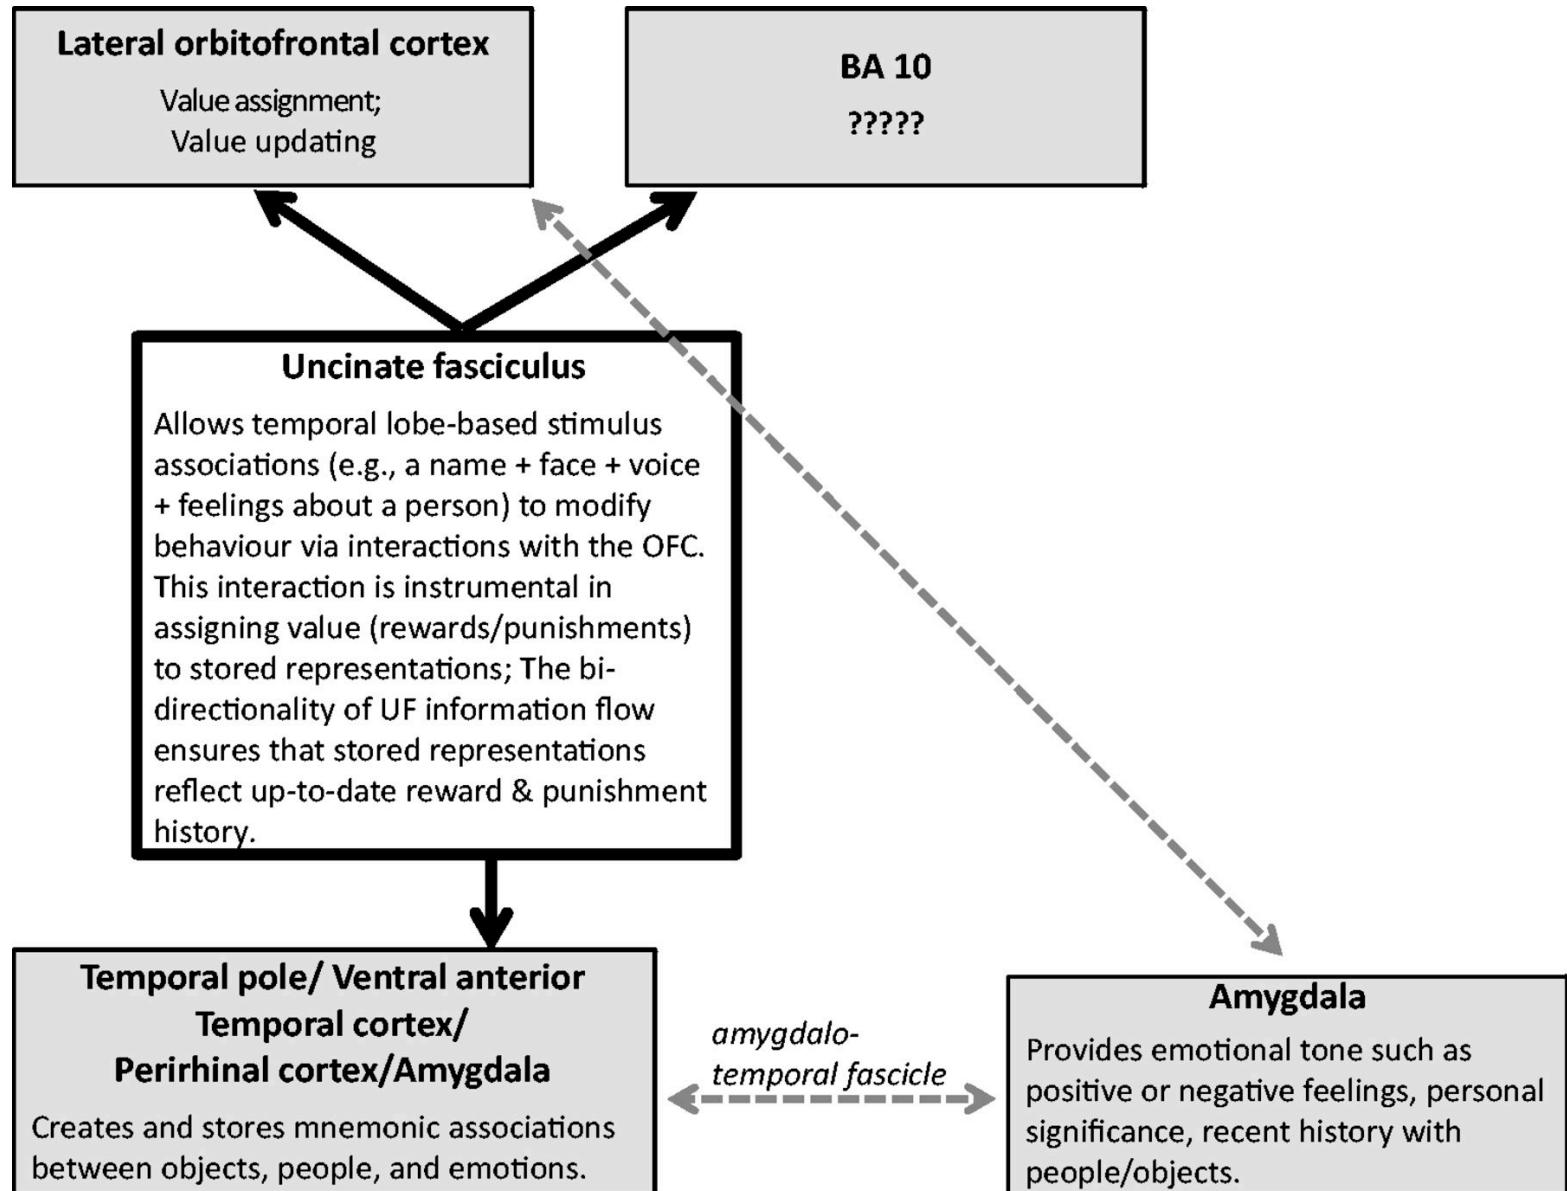

# Afferents and Efferents

- The uncinate is monosynaptic and bidirectional, connecting the anterior temporal lobe with the medial and lateral OFC

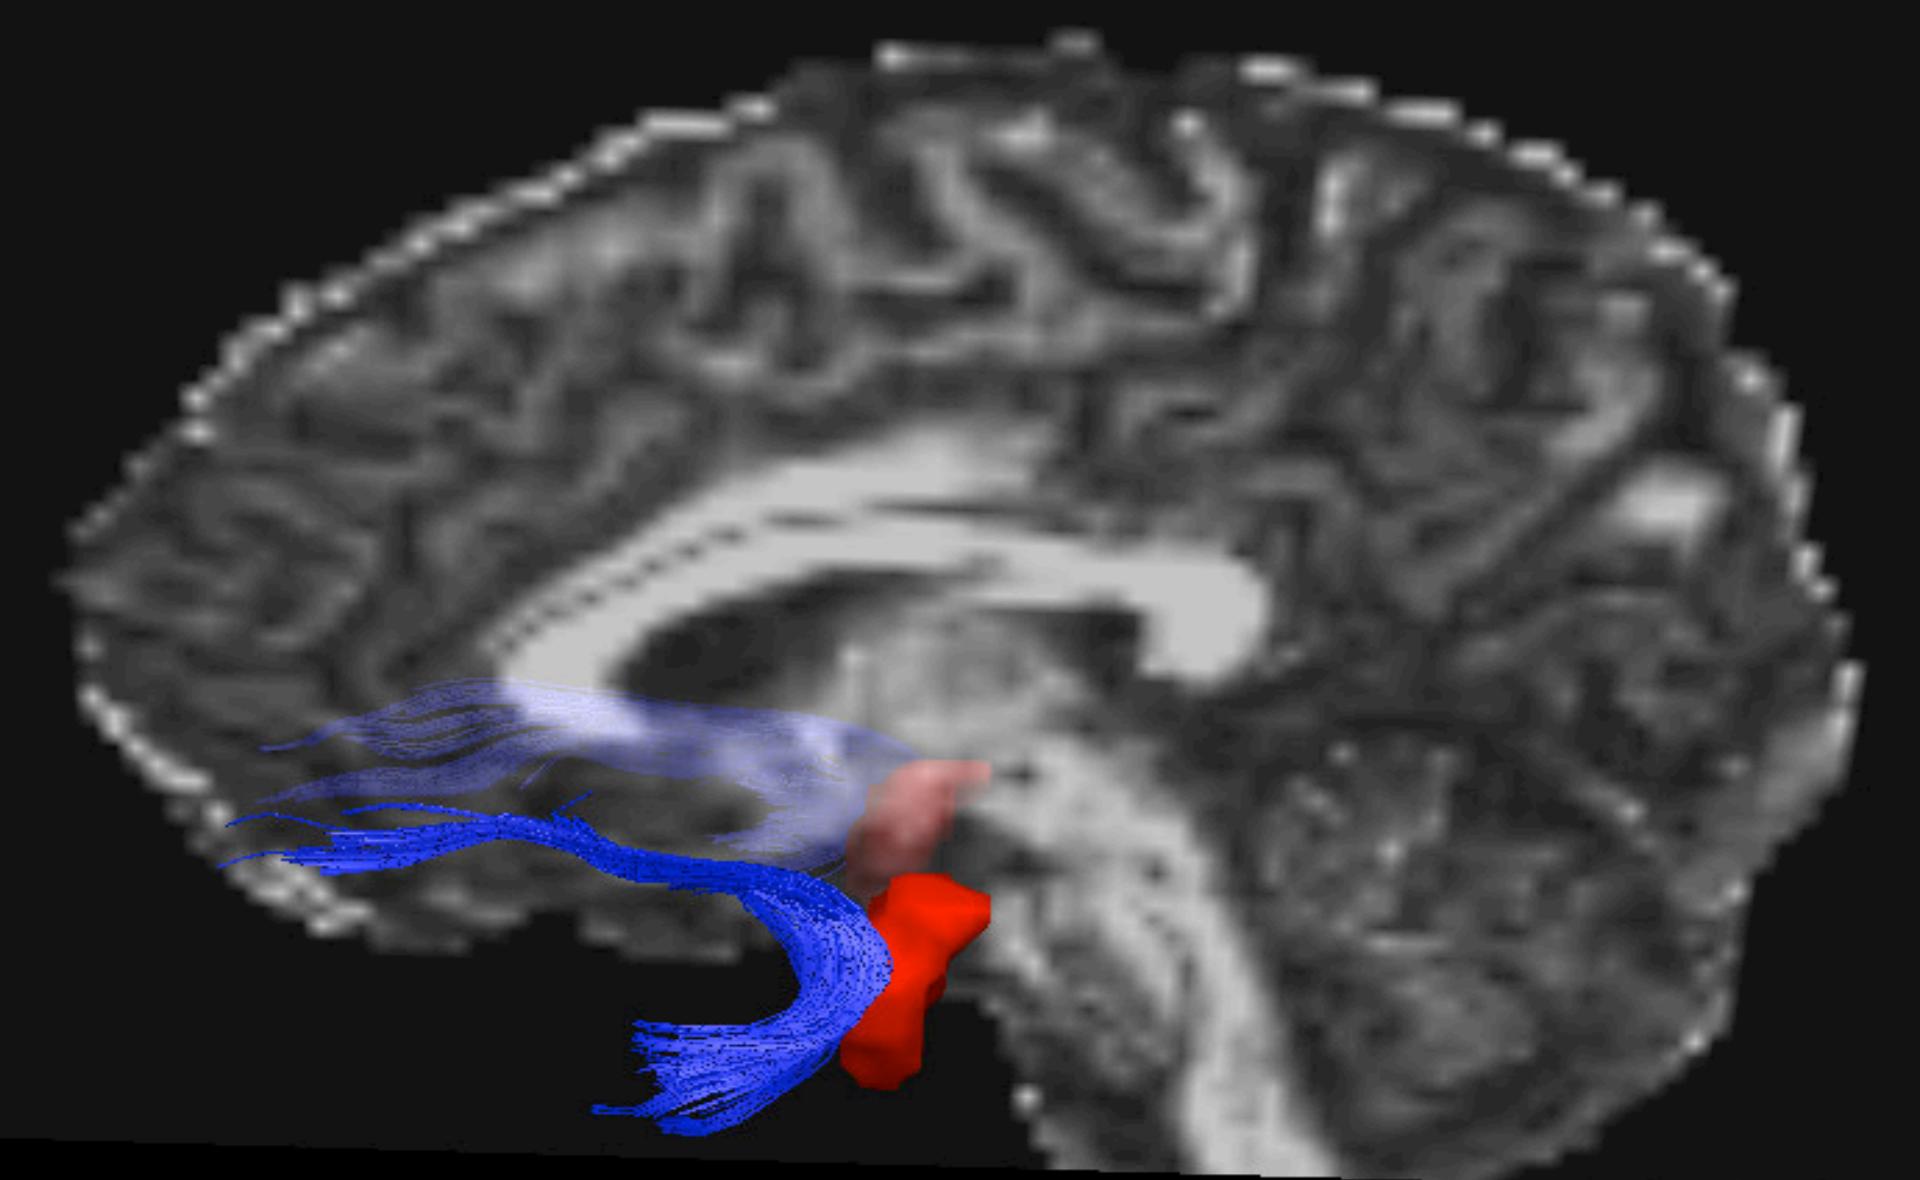

Catani & Thiebaut de Schotten et al., 2008

# A Proposed Model of UF Function

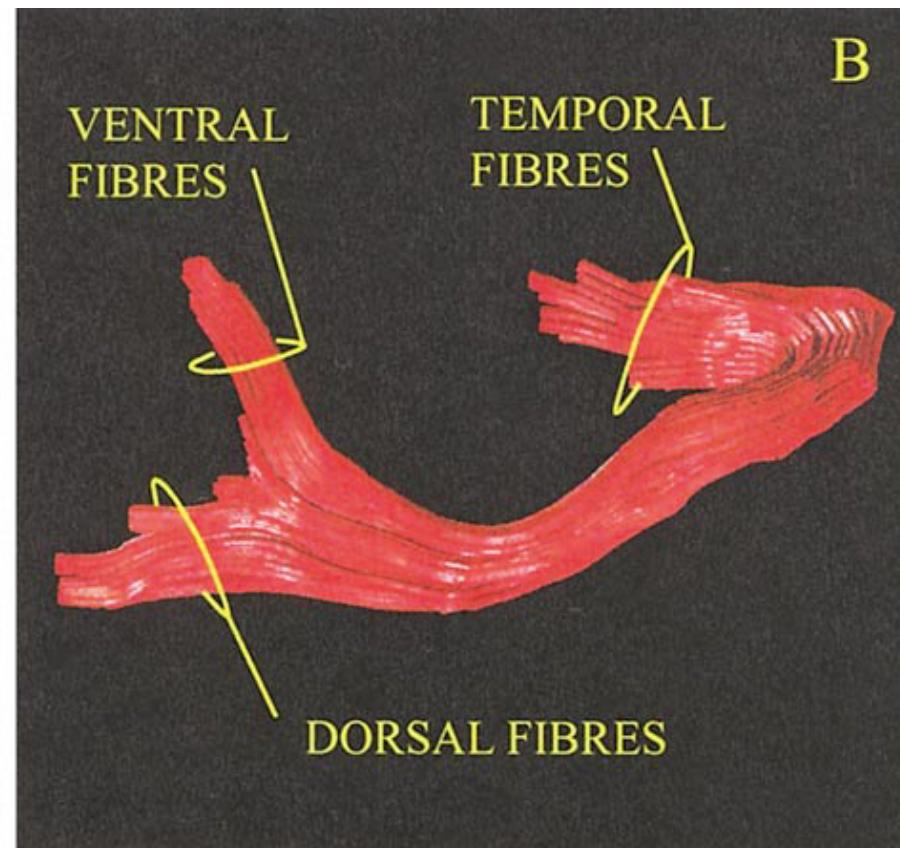

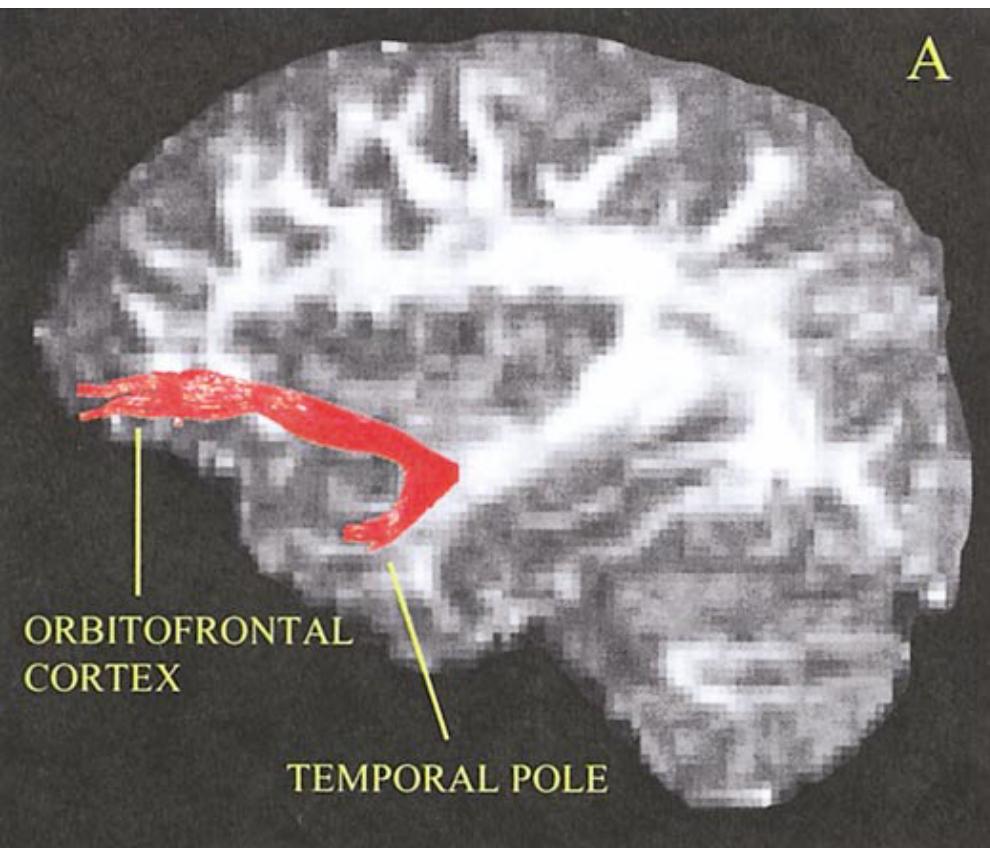

# Afferents and Efferents

- The exact cortical connections of the uncinate fasciculus are still a matter of debate, especially with regards to the amygdala and hippocampus

**uncinate fasciculus**  
**amygdala**

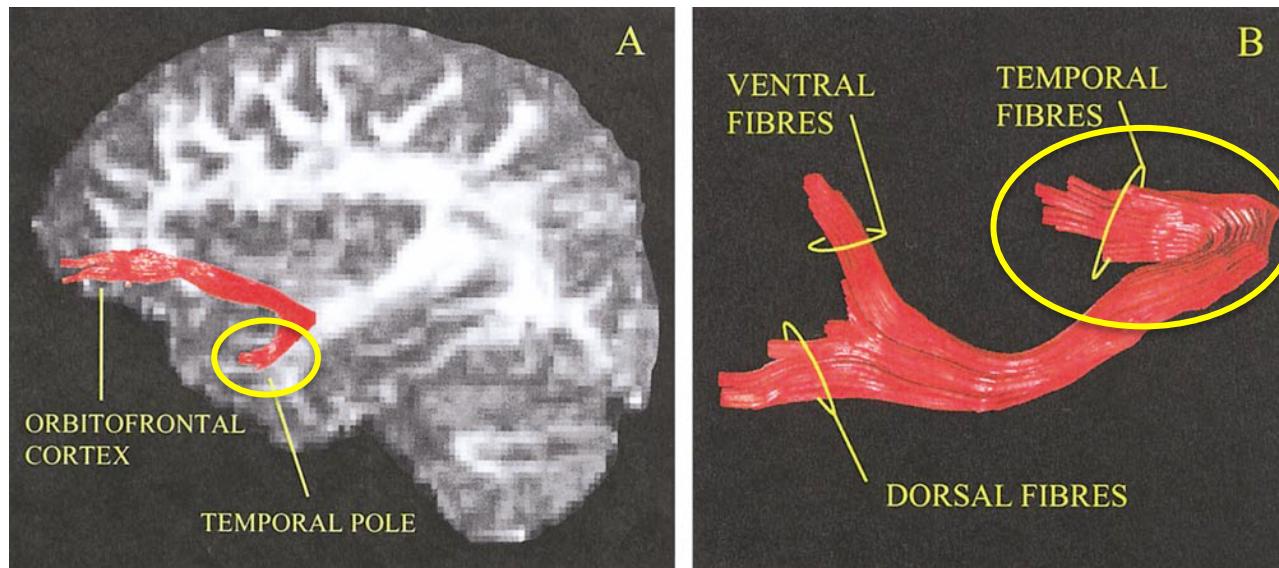

# Three Segments

# Afferents and Efferents

## – Dorsal/temporal Segment

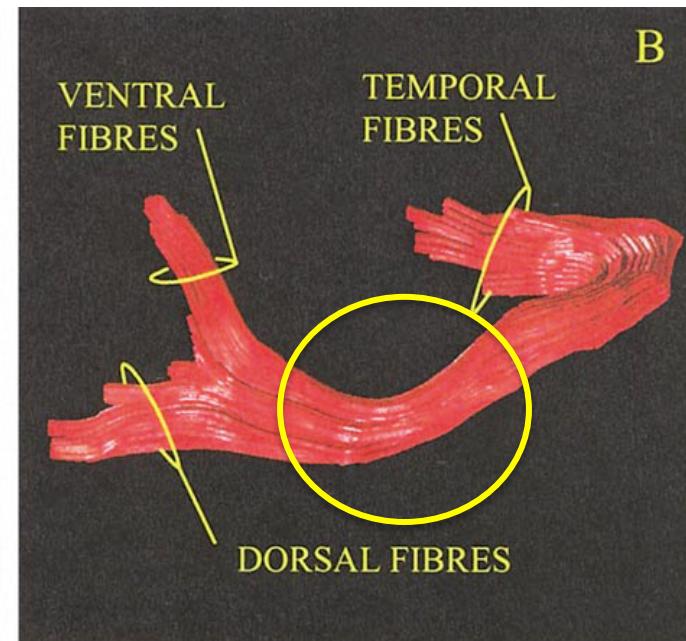

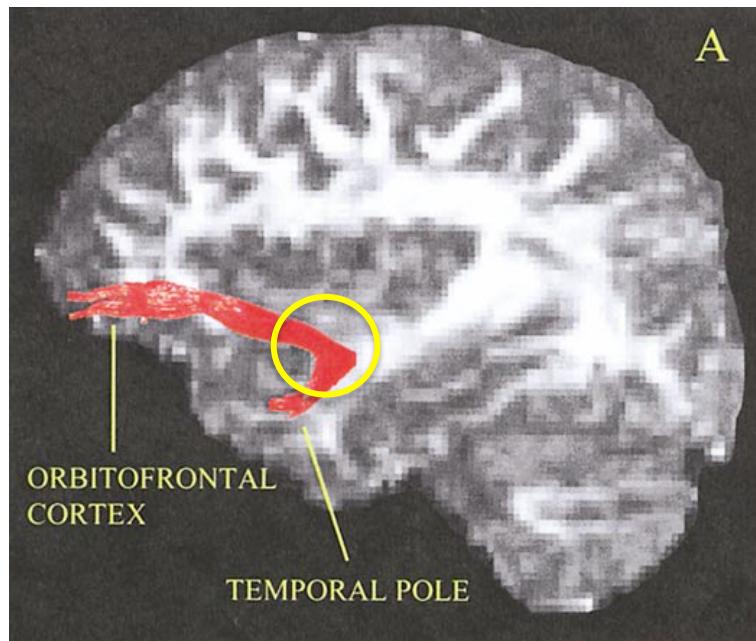

- Originates from the uncus (BA35), entorhinal/perirhinal cortices (i.e. cortical nuclei of the amygdala, BA28/34/36) and temporal pole (BA20/38)
- Contains uncinate cell bodies

# Afferents and Efferents

## – Middle/insular

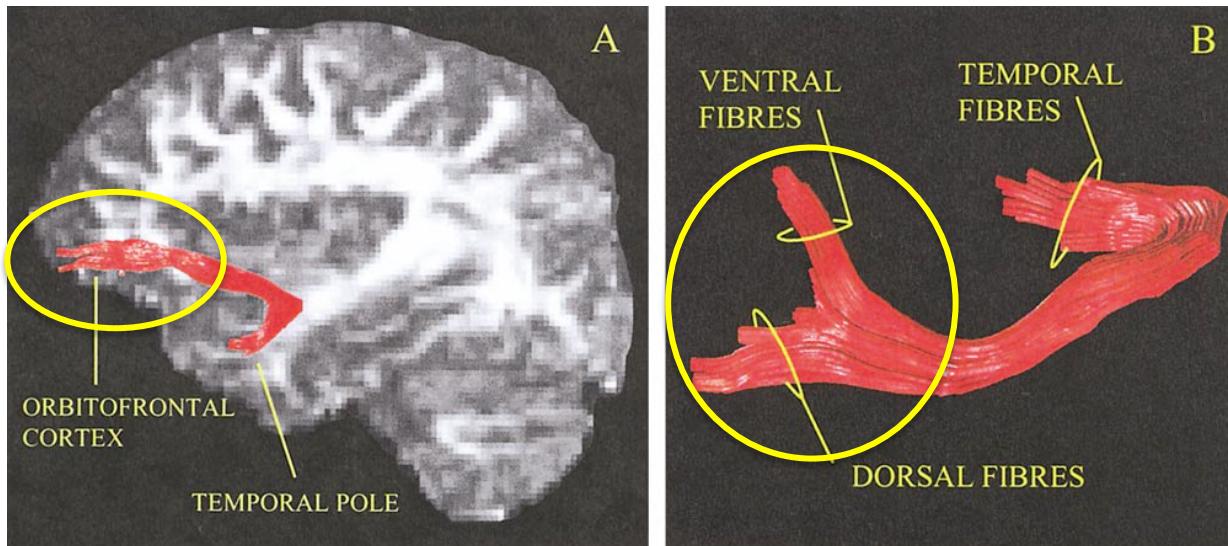

- Passes up over the lateral nucleus of the amygdala and near/through the external capsule and extreme capsule

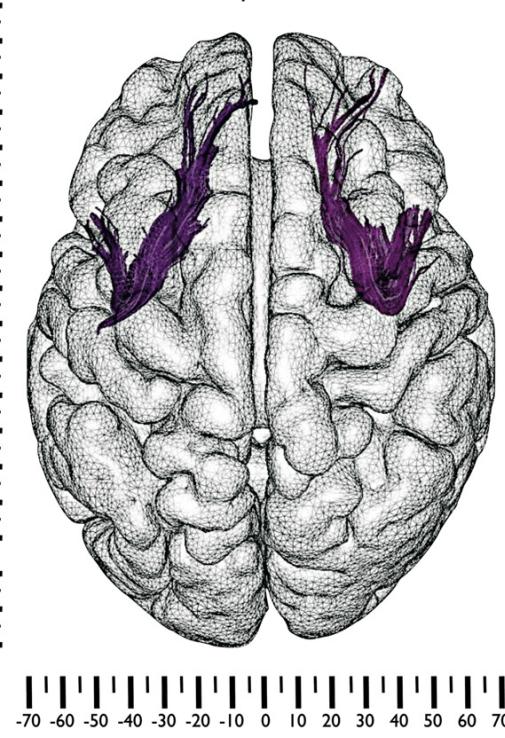

# Afferents and Efferents

## – Ventral/frontal

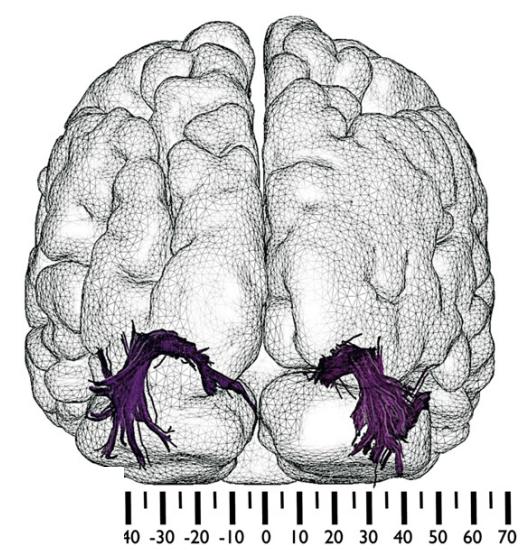

- Horizontal fan-shaped extension into the orbital frontal lobe
- Fan splits into two branches
  - Larger ventro-lateral terminates in lateral OFC
  - Smaller medial branch to frontal pole

# Tractography Goals

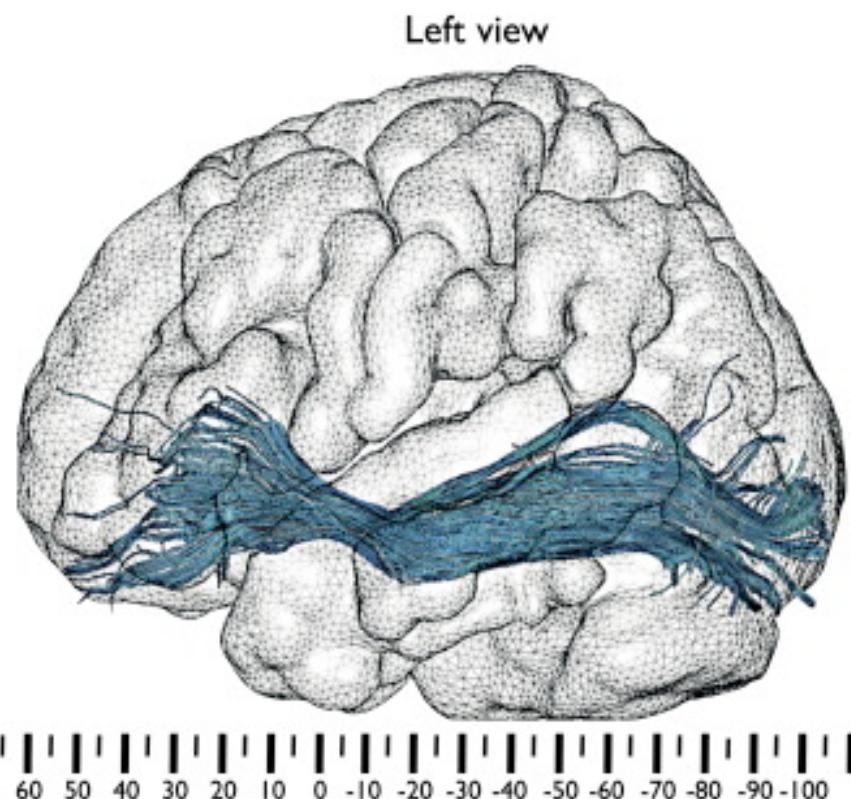

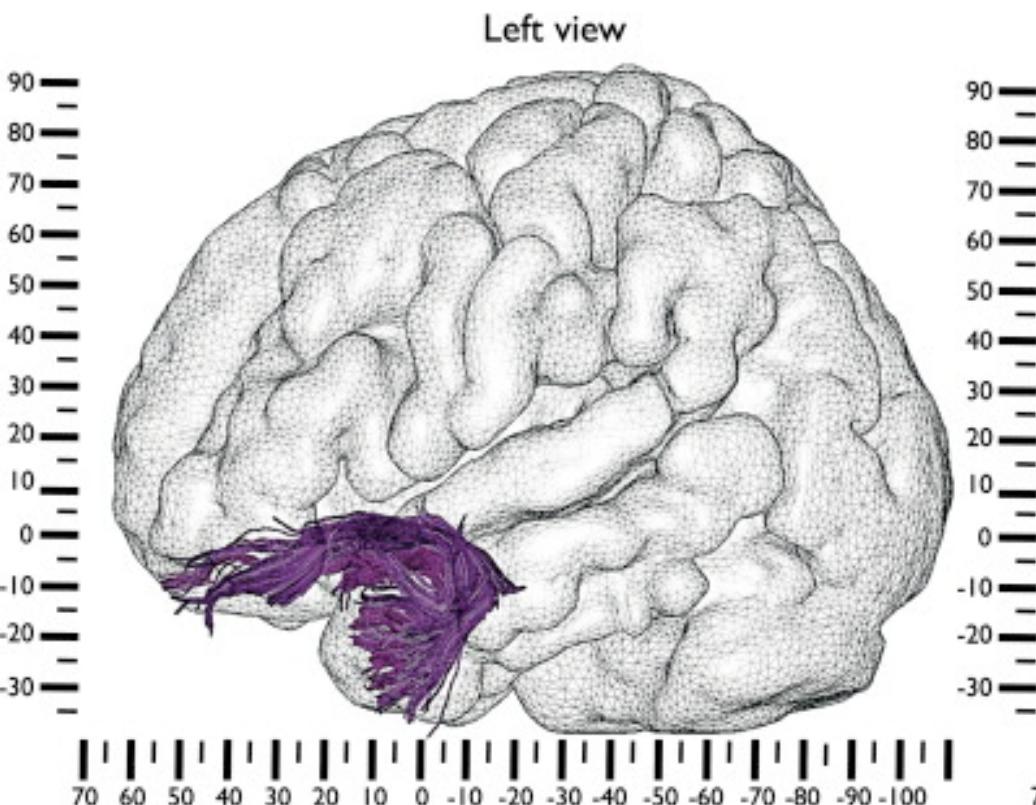

- Map the uncinate fasciculus
- Explore connectivity between frontal and temporal tracts, the amygdala, and the hippocampus

# Tractography

1. Load up the CMU-80 fib file
2. Load up the TI image
3. Select Atlas → JHU → Left Uncinate Fasiculus
4. Run tracking, default parameters, UF as ROI

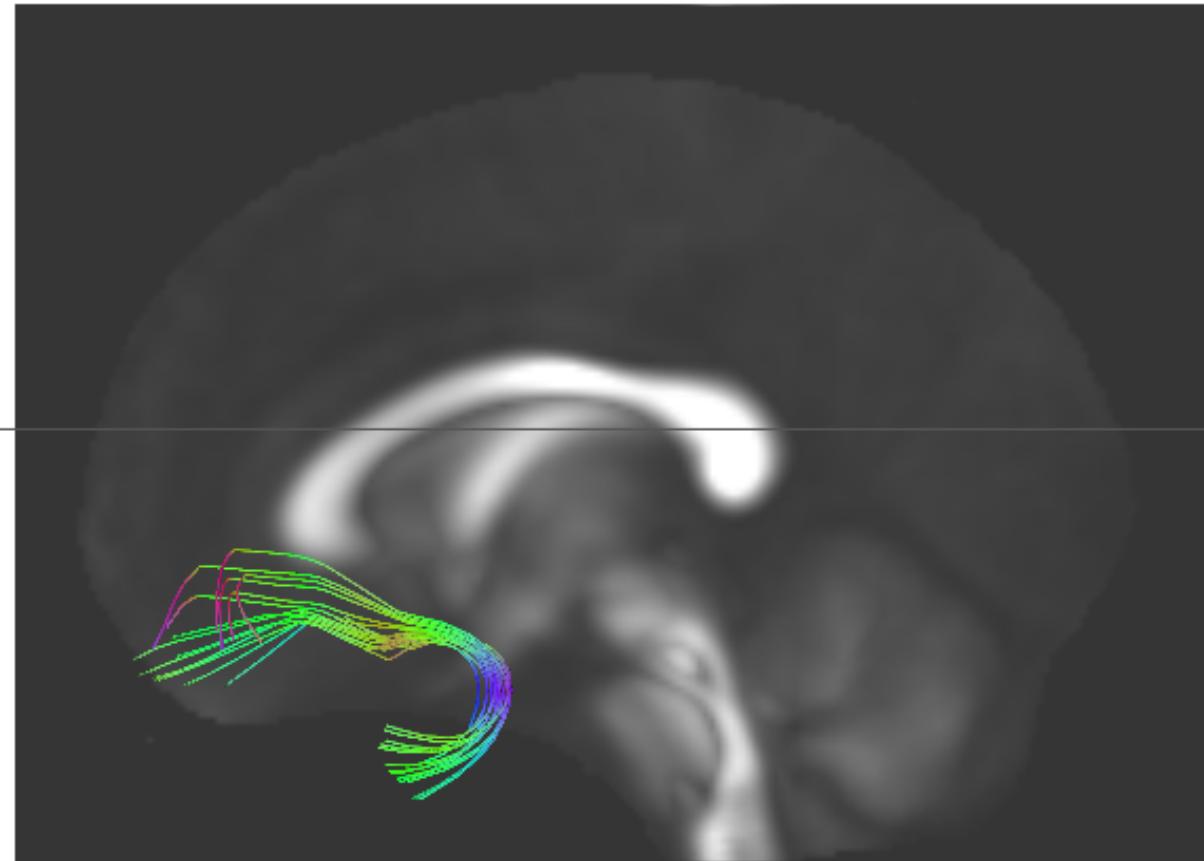

# Uncinate vs. IFOF

# Tractography

1. From the AAL atlas, load:
  1. Frontal\_Sup\_Orb\_L
  2. Frontal\_Mid\_Orb\_L
  3. Frontal\_Inf\_Orb\_L
  4. Merge these ROIs
2. From the AAL atlas, load:
  1. Temporal\_Pole\_Sup\_L
  2. Temporal\_Pole\_mid\_L
  3. Merge these ROIs
3. Run tracking with default parameters (SEEDS NOT TRACTS), both merged regions as ROIs

# How can we improve this image?

# Exploratory Analyses

1. Save your uncinate tracking as an ROI
2. Load amygdala\_L and hippocampus\_L from AAL atlas
3. Examine tracts running between Temporal Pole ROI and amygdala
4. Examine tracts running between OFC ROI and amygdala
5. Repeat for hippocampus
6. What does the overlap between these fibers and the uncinate ROI you saved look like?
