How to Complete a RAM Waste Tag

On the back, record the activity (uCi), date and initials every time material is added to the waste container(s).

NOTE: Incompletely packaged (e.g. untagged; solid waste bag without a zip-tie; etc), overfilled or contaminated waste will not be removed.

Upon receiving the waste container, record the isotope that will go inside (e.g. P-32).

When the container is full and ready for pickup, fill in the total amount of RAM (uCi added from the back), date and sign. Email the RSO for pickup.
