Carnegie Mellon University

Academic Audit Application Updates

August 2018

New Features

- Deep student activity log
- Expected Graduation
- Hyperlinks in notes & feedback
- See completed credits at-a-glance
- Audit features
- Batch pdf printing order now follows the sort order chosen for advisee search results.
- Advisor+Student Account: University can request for a user who is both a student and an advisor which view they want them to have. The switch is made manually from the backend for now
- Show department of a program on the permissions tab in User Management System
- Allow users to pick any audit version when looking for courses that satisfy a program requirement. Previously, this was limited to the default audit version of a program.
- Templates Workflow: Users (with the right permission) can create/edit templates for programs and super-admins can publish them.
- Primary constraints on the requirements are no longer allowed to be waived through exceptions.

Fixed Issues

- Only use default units for a degree when total units are not explicitly defined by the program audit.
- When feeder file changes course units, update the cached units for template courses
- Reindex courses counting for shared requirements when updates are published
- Fix campus filter for search advisees
- Unmatched courses were sometimes different in pdf and web version
- Reduce advisee indexing time when a student adds an unofficial advisor
- Min-x units sometimes not picking courses when there are more than 10,000 possibilities
- Show placeholders of child sub-requirements if the top requirement is using it to satisfy min-x units.
- Advisor seeing their own note twice
- Update library for Internet Explorer
- When no progress data is available, the bar is now grey instead of green
- Update XSDs for multiple advisors, course and schedule metadata, certified programs
- Remove verify_plan from superadmins
- Primary advisors automatically get verify_plan through data sync
