Stem Cell Review Worksheet

Name:	Date:
As you listen to the present	tation, fill in the definitions below.
Four main components of ma	mmalian cells:
1. Nucleus:	
2. Membrane:	
3. Organelles:	
4. Cytoplasm:	
Levels of organization in the body	:
DNA:	
Cell:	
Tissue:	
Organ:	
Organism:	
What are Stem Cells: what doe Differentiate:	es it mean to differentiate and self-renew , unlike other somatic cells?
Self-renewal:	

@Carnegie Mellon, Isabel Joyce, and Cassandra Dodson. Note: This educational resource was developed by Isabel Joyce, MS Biomedical Engineering, 2022, and Cassandra Dodson, MS Biomedical Engineering, 2022, for the course *Directed Study* during the Spring of 2022, taught by Dr. Conrad Zapanta and co-advised by Dr. Judith Hallinen. Some information created by Dr. Rachelle Palchesko for the course *Stem Cell Engineering* at Carnegie Mellon, used by permission.

The healing process:	
1. Fibrosis	
2. Inflammatory	
3. Proliferation	
4. Remodeling	
Other examples of stem-cells in the body:	
Broken bone:	
Heart attack:	
Hair regrowth:	
Intestinal lining:	
Types of stem-cells:	
EMBRYONIC stem cells:	
What are they?	
Where do we find these cells?	
Where do we find these cells? Pros:	
Pros: Cons:	
Pros:	
Pros: Cons: ADULT stem cells:	
Pros: Cons: ADULT stem cells: What are they?	
Pros: Cons: ADULT stem cells: What are they? Where do we find these cells?	

Adult stem cell types:
Neural:
Epithelial:
Hematopoietic:
Mesenchymal:
Induced Pluripotent stem cells:
What are they?
Where do we find these cells?
How are they reprogrammed?
What cells can they become?
Pros:
Cons:
Why do we care in medicine?
What do stem cells do in the body?
Stem cell therapies:
Alzheimer's:
Blindness:
Cancer:
Diabetes:
Heart Attack:
Vascular Grafts:

@ I. Joyce, C. Dodson, Carnegie Mellon 2022
