

Create your own Notebook Guide in minutes!

Upload your sources and the Notebook Guide Template to an AI tool of your choice, then use the prompt below to generate a customized guide for your project.

I have uploaded:

- A NotebookLM Guide Template
- Project documents and source materials

Using the uploaded template as your model, create a customized NotebookLM Guide for this project.

Your Task

Analyze the uploaded sources and generate a complete NotebookLM Guide that:

- Identifies the project's purpose and intended audience
- Recommends project-specific goals and research questions
- Establishes an evidence hierarchy based on the uploaded materials
- Suggests an appropriate analytical framework
- Creates guidance for interpreting qualitative and quantitative data
- Recommends stakeholder interpretation rules and bias-mitigation practices
- Includes confidentiality, ethics, and reporting considerations
- Defines a clear output structure for NotebookLM responses

Requirements

- Follow the structure and intent of the uploaded template.
- Adapt all sections to the specific project and sources provided.
- Populate fields whenever information can be inferred from the documents.
- Use placeholders only when information is unavailable.
- Strengthen or modify sections where appropriate to improve analytical rigor and usability.
- Write the final output as a polished NotebookLM Guide that can be uploaded directly into NotebookLM.

The final guide should help NotebookLM generate accurate, evidence-based, and stakeholder-ready outputs aligned with the project's goals.
