

Dr. Yung Joon Jung is an Associate Professor of Mechanical Engineering who received his Ph.D. in Materials Science and Engineering from Rensselaer Polytechnic Institute in 2003. In 2002, he worked as a visiting researcher at NTT Basic Research Laboratories (Device Physics) in Japan. From 2003 to 2005 he worked as a Postdoctoral Fellow at Rensselaer, and joined Northeastern University at 2005, working in the Department of Mechanical and Industrial Engineering and Center for Highrate Nanomanufacturing. Currently He is also working as a faculty director in Materials Characterization Center at Kostas Homeland Security Institute, Northeastern University. The research of Jung's research lab focuses on investigating new synthetic routes for 1-2D nanomaterials and engineering their molecular structures. His group also develops nanomanufacturing processes such as assembly, transfer and integration of nanomaterials and nanostructured architectures for nanoelectronics and flexible energy storage applications supported by National Science Foundation (Nanomanufacturing, ECCS, DMREF- Materials Genome Initiative), Department of Defense, US Army, Ministry of Industry and Resource in Republic of Korea and other industries. He published over 58 articles in journals and book chapters such as Nature, Nature Photonics, Nature Communications, JACS, Nano Letters, ACS Nano, PNAS etc.
