Hee Dong Han, Ph.D., Assistant Professor. I received Ph.D. from the Chemical Engineering at the Chungnam National University, South Korea in 2005. After continuing my research career as an instructor at MD Anderson Cancer Center, USA (2007-2012), I joined Konkuk University as an Assistant Professor. My research is focused in three main areas: 1) nanoparticle-based drug delivery system for cancer therapy, 2) development of new strategies for systemic in vivo siRNA delivery, 3) dendritic cell-based cancer immunotherapy using nanoparticle-based vaccine system. I have been working on nanoparticle-based novel approach for cancer chemotherapy and immunotherapy.
