

The 20th U.S.–Korea Forum on Nanotechnology

Norbert M. Linke

Associate Professor of Physics
University of Maryland

Norbert M. Linke is an Associate Professor of Physics, a Fellow of the Joint Quantum Institute, and the Director of QLab, the National Quantum Laboratory at the University of Maryland (UMD). His research focuses on quantum applications of trapped ions and the realization of quantum algorithms. Born in Munich, Germany, he graduated from the University of Ulm and received his doctorate at the University of Oxford, UK, working on microfabricated ion traps and microwave-addressing of ions. He spent four years as a postdoc and research scientist in the group of Chris Monroe at UMD, where he led a project that turned a physics experiment into a programmable quantum computer. He became an Assistant Professor at UMD in 2019. From 2022, he spent three years at the Duke Quantum Center at Duke University in Durham, NC, working on quantum networking. In 2025, he returned to UMD to become the Director of QLab, a user facility providing access to quantum computers for researchers, educators, and start-ups.
