Dr Michael Wilkins is a Staff Scientist at Pacific Northwest National Laboratory (PNNL), working in the Microbiology Group of the Biological Sciences Division. Prior to joining PNNL in 2009, Dr Wilkins obtained his Ph.D from the University of Manchester in the United Kingdom, and subsequently carried out postdoctoral research in the laboratory of Professor Jill Banfield at the University of California Berkeley. His research interests include investigating how subsurface biogeochemical cycles relate to carbon fluxes and the fate and transport of contaminant metals in subsurface environments. Dr Wilkins has authored papers in a range of disciplines including geochemistry, geomicrobiology and proteogenomics, and has been the recipient of a number of peer reviewed synchrotron beamtime allocations. Dr Wilkins currently collaborates with researchers at Stanford, LBNL, UW Madison, and Princeton.
