

Student i>clicker Remote

i>clicker is a classroom response system that enables you to electronically submit answers to questions your instructor poses during class.

Look for additional information from your instructor.

Battery Recommendations

- Three (3) AAA batteries required.
- *Energizer* brand batteries are recommended because other brands are often too short to make contact.
- Make sure you change all 3 batteries because the 3rd battery may stick inside the remote compartment.
- Remove the plastic tab from the battery compartment before use.

Hold on to your i>clicker remote for use in future classes.

You may want to report lost or stolen i>clickers to your instructors (especially if clickers are being used for grades and/or attendance).
